

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATION

Year ended December 31, 2011

Management's discussion and analysis ("MD&A") is current to April 30, 2012 and is management's assessment of the operations and the financial results together with future prospects of CGX Energy Inc. ("CGX" or the "Company"). All figures are in United States dollars, unless otherwise stated. This MD&A should be read in conjunction with the Company's audited consolidated financial statements and the related notes for the years ended December 31, 2011 and 2010 (the "Financial Statements"). This discussion contains forward-looking statements that are not historical in nature and involves risks and uncertainties. Forward-looking statements are not guarantees as to CGX's future results as there are inherent difficulties in predicting future results. Accordingly, actual results could differ materially from those expressed or implied in the forward-looking statements. The Company has adopted National Instrument 51-102F1 as the guideline in presenting the MD&A. Additional information relevant to the Company's activities, including the Company's Annual Information Form, can be found on the Canadian Securities Administrators' website SEDAR at www.sedar.com.

Advisory Note Regarding Forward Looking Statements

This MD&A includes "forward-looking statements", within the meaning of applicable securities legislation, which are based on the opinions and estimates of Management and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "budget", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and other similar words suggesting future outcomes or statements regarding an outlook. Such risks and uncertainties include, but are not limited to, risks associated with the oil and gas industry (including operational risks in exploration development and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainty of reserve estimates; the uncertainty of estimates and projections in relation to production, costs and expenses; the uncertainty surrounding the ability of CGX to obtain all permits, consents or authorizations required for its operations and activities; and health safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the ability of CGX to fund the capital and operating expenses necessary to achieve the business objectives, the uncertainty associated with commercial negotiations and negotiating with foreign governments and risks associated with international business activities, as well as those risks described in public disclosure documents filed by CGX. The ability of the Company to carry out its business plan is primarily dependent upon the continued support of its Shareholders, the discovery of economically recoverable reserves and the ability of the Company to obtain financing to develop such reserves. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in securities of CGX should not place undue reliance on these forward-looking statements. Statements in relation to "reserves" and "resources" are deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the resources and reserves described can be profitably produced in the future.

Although the forward-looking statements contained in this MD&A are based on assumption that management believes to be reasonable, the Company cannot assure investors that actual results will be consistent with these forward-looking statements.

Readers are cautioned that the foregoing lists of risks, uncertainties and other factors are not exhaustive. The forward-looking statements contained in this MD&A are made as of the date hereof and the Company undertakes no obligation to update publicly or revise any forward-looking statements contained in this document or in any other documents filed with Canadian securities regulatory authorities, whether as a result of new information, future events or otherwise, except in accordance with applicable securities laws. The forward-looking statements contained in this document are expressly qualified by this advisory statement.

OVERVIEW

Company Profile

CGX is an oil and gas exploration and production company operating in Guyana, South America and headquartered in Toronto, Canada. The Company through its foreign subsidiaries holds interests in four petroleum agreements (“PAs”) in the Guyana-Suriname Basin, a frontier basin in South America. The Company’s licences in Guyana cover 7.8 million acres gross, 6.4 million acres net. The common shares of the Company are traded on the TSX Venture Exchange (“TSXV”) under the symbol OYL.

CGX has five direct subsidiaries: (i) CGX Resources Inc., a wholly-owned subsidiary, which is incorporated pursuant to the laws of Bahamas (“CGX Resources”); (ii) ON Energy Inc., a corporation subsisting under the laws of Guyana, 62% of the voting shares of which are owned by CGX (“ON Energy”); (iii) 1524555 Alberta Ltd., a wholly-owned subsidiary, which is incorporated pursuant to the laws of Alberta; (iv) GCIE Holdings Limited, a wholly-owned subsidiary, which is incorporated pursuant to the laws of Barbados which corporation owns 100% of the shares of Grand Canal Industrial Estates Inc., a corporation subsisting under the laws of Guyana; and (v) CGX Energy Management Corp., a wholly owned subsidiary incorporated pursuant to the laws of the State of Delaware, USA.

Carrying on Business in Guyana

The exploration activities of CGX are currently conducted in Guyana through its subsidiaries. The following description of carrying on business in Guyana is taken from publicly available information provided by the Guyana Office for Investment and is available at www.guyanaconsulate.com under the heading "Guyana Investment Guide".

Guyana is situated on the northern coast of the South American continent. It is bound on the north by the Atlantic Ocean, on the east by Suriname, on the south-west by Brazil and on the north-west by Venezuela. Guyana's total area is approximately 215,000 square kilometres, slightly smaller than Great Britain. Its coastline is approximately 4.5 feet below sea level at high tide, while its hinterland contains mountains, forests, and savannahs. This topography has endowed Guyana with its extensive network of rivers and creeks as well as a large number of waterfalls. Guyana is endowed with natural resources including fertile agricultural land and rich mineral deposits (including gold, diamonds and semi-precious stones, bauxite and manganese).

Guyana is divided into three counties (Demerara, Essequibo and Berbice) and 10 administrative regions. Georgetown is the capital city of Guyana, the seat of government, the main commercial centre, and the principal port. In addition to Georgetown, Guyana has six towns of administrative and commercial importance which are recognized municipal districts; each has its own mayor, council and civic responsibilities. Guyana’s population is estimated to be approximately 770,000.

The Co-operative Republic of Guyana is an independent republic headed by the president and National Assembly. The most recent elections were held in November 2011 in which the People’s Progressive Party was re-elected as a minority government. Guyana is a member of the British Commonwealth of Nations, with a legal system based for the most part on British Common Law.

Petroleum Agreements (“PAs”) and Petroleum Prospecting Licences (“PPLs”)

CGX was incorporated in 1998 for the primary purpose of exploring for hydrocarbons in Guyana, South America. As at December 31, 2011, CGX holds an interest in four PAs (Corentyne, Georgetown, Berbice, and Pomeroon) covering a total of approximately 7.8 million gross acres (approximately 6.4 million acres net) offshore and onshore Guyana.

Each Petroleum Agreement corresponds to a separate PPL, with the exception of the Corentyne PA. The Corentyne PA covers two PPL's, the Annex PPL and the Corentyne PPL, each owned 100% by CGX Resources. The Corentyne PPL is also split into two components - the exploration rights offshore owned 100% by CGX Resources and the exploration rights onshore owned 100% by ON Energy. The Company has a 62% ownership interest in ON Energy.

Company Funding and Financing

On August 17, 2010, CGX closed its financing of 40,000,000 common shares of the Company at a price of C\$0.50 per share for total gross proceeds to the Company of C\$20,000,000 or US\$19,186,500.

On December 14, 2010, CGX closed its financing of 25,587,500 common shares of the Company at a price of C\$0.90 per share for total gross proceeds to the Company of C\$23,028,750 or US\$22,880,000.

In July 2011, CGX announced a shareholders rights plan (the "Rights Plan") for fair and equal treatment of shareholders in connection with any take-over bid for the outstanding securities of the Company. The Rights Plan provides the Board of Directors with 60 days to assess a take-over bid, consider alternatives as a means of maximizing shareholder value. The Rights Plan becomes exercisable only if a person acquires or announces intention to acquire 20% or more of the common shares of the Company.

On October 19, 2011, CGX closed its financing of 131,445,000 common shares of the Company at a price of C\$0.70 per share for gross proceeds of C\$92,011,500 or US\$90,190,000. These proceeds are being used to fund the Company's share of the drilling of the Jaguar-1 exploration well on the Georgetown PPL, and the drilling of the Eagle-1 exploration well on the Corentyne PPL. The funds were also used to acquire 3D seismic in preparation for drilling the final commitment well on the Corentyne PPL.

GUYANA OPERATIONS

Corentyne Petroleum Agreement, Guyana

The Corentyne PA covers approximately 2.9 million acres under two separate PPLs. The Annex PPL (1.0 million acres) is held 100%, as is the offshore portion of the Corentyne PPL (1.5 million acres), while the onshore portion of the Corentyne PPL (0.4 million acres) is held net 62% by CGX through ON Energy.

The Corentyne PA was awarded to CGX in 1998, following which the Company began an active exploration program consisting of an 1,800 kilometre seismic acquisition and preparations to drill the Eagle well. The Eagle drilling location in 2000 was 15 kilometres within Guyana-Suriname border. However, a border dispute between Guyana and Suriname led to the Company being forced off the Eagle location before drilling could begin. As a result of that incident, all active offshore exploration in Guyana was suspended by CGX and other operators in the area, including Exxon and Maxus (Repsol YPF). On September 17, 2007, the International Tribunal on the Law of the Sea ("ITLOS") awarded a maritime boundary between Guyana and Suriname. In the decision the ITLOS Tribunal determined that it had the jurisdiction to decide on the merits of the dispute, and that the line adopted by the ITLOS Tribunal to delimit the Parties' continental shelf and exclusive economic zone follows an unadjusted equidistance line. The arbitration was compulsory and binding. CGX financed a significant portion of Guyana's legal expense at a cost of \$9,800,000. The decision was beneficial for CGX, as it concluded that 93% of CGX's Corentyne PPL and 100% of the Georgetown PPL would be in Guyana territory.

Because CGX was prevented from gaining unhindered access to a portion of the Corentyne licence area during the seven year resolution, the term of the contract was extended to June 2013.

During the seven year border resolution period, CGX expanded its regional understanding of the Guyana Suriname Basin by acquiring and reinterpreting historic information, mainly seismic data, and acquiring interests in the surrounding concessions.

In 2008, CGX was the first company to commit to acquire 3D seismic in Guyana when the Company shot a 505 square kilometre 3D seismic program to enhance its interpretation of its newly defined Eagle Deep

prospect, a large stratigraphic trap in the Cretaceous. The cost of the seismic program was approximately US\$8,000,000. Processing and interpretation of the 3D seismic was completed in 2009.

Based on the interpretation of the 3D seismic volume and recent activities on both sides of the Atlantic margin, CGX has interpreted numerous prospects on the Corentyne PPL. One significant prospect is a Turonian sand at approximately 5,600 metres. Because the offset Jaguar-1 well on the Georgetown license will test the Cretaceous Turonian prospect, the Corentyne commitment well is targeted to 4,250 metres to test the Tertiary Eocene and Cretaceous Maastrichtian trend. A second well may be planned for the Corentyne PPL to test the deeper objectives.

On April 15, 2011, an Independent Resource Assessment was completed by Gustavson Associates LLC of Boulder, Colorado, U.S.A. ("Gustavson") for three prospects on the Corentyne PPL that could be tested by the Eagle well (the "Gustavson Report"). The resource estimate did not change from Gustavson's original report dated March 3, 2010, as no new material data had been acquired since the original report. The Gustavson Report has been filed on SEDAR (www.sedar.com) and on the Company's website (www.cgxenergy.com). The Gustavson Report was prepared in accordance with the requirements of *National Instrument 51-101 Standards of Disclosure for Oil and Gas Activities* ("NI 51-101").

As of June 15, 2011, an Independent Resources Evaluation was completed by DeGolyer and MacNaughton of Dallas, Texas, USA ("D&M") for two Cretaceous Albian prospects (Crabwood and Kabukalli) also located on CGX's Corentyne offshore PPL (the "D&M Report"). Using probabilistic analysis, D&M estimated a total best estimate (P50) prospective resources for the two prospects of 325 million barrels of oil. The D&M Report has been filed on SEDAR (www.sedar.com) and on CGX's website (www.cgxenergy.com). The D&M Report is in addition to the Gustavson Report of April 15, 2011 which addressed three other prospects. The D&M Report was prepared in accordance with the requirements of NI 51-101 Section 5.9.

Contractual Commitments

The Corentyne PPL entered the second renewal period on June 24, 2010 for a term of three years. The second renewal phase was divided into two phases of 18 months, each requiring the drilling of one exploration well.

On November 22, 2011, the Company entered into a contract with a subsidiary of Diamond Offshore Drilling, Inc. to use the Ocean Saratoga semi-submersible drilling rig for the drilling of Eagle-1 exploration well. The Company's minimum commitment under this contract is approximately \$8,500,000. Due to delays in the arrival of the drilling rig, the Company sought and received a deferral of the well commitment into the second phase of the second renewal period.

The Eagle-1 well spud on February 13, 2012 and is anticipated to be a 60-day well targeting prospects in the Eocene and Maastrichtian geologic zones. As at December 31, 2012, the aggregate cost to drill the Eagle-1 well is estimated to be approximately \$57,000,000. Costs of \$52,000,000 have been incurred as at April 16, 2012 with respect to the Eagle-1 well.

Following the Eagle-1 well, the Company has plans to drill the second commitment well within the next 12 months. Beginning in December 2011, the Company acquired an additional 1,160 square kilometres of 3D seismic on the Corentyne PPL to provide better imaging of prospects in the Turonian, Campanian and Albian. Fast-track results have been received and the interpretation of this volume is underway. The well location of the second commitment well will be determined in conjunction with this data and results obtained from the Eagle-1 well, the Jaguar-1 well.

Under the Corentyne PPL, the exploration license expires on June 24, 2013. To meet the minimum work program thereunder, the Company is required to drill two exploration wells, the first of which was to have commenced drilling by December 24, 2011. The Company made a request for a continuation of that obligation into 2012.

On November 3, 2011, the Company signed an extension on its proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's proportionate percentage interest share of the minimum expenditure obligation for the first phase of the second renewal period. The Guarantee is intended to be and shall be constructed as continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of \$3,400,000 and shall remain in force and effect until the end of the second renewal period under the agreement which ends on June 24, 2013.

Georgetown Petroleum Agreement, Guyana

The Georgetown PA was granted to Maxus Guyana Ltd. (now YPF Guyana Ltd. ("YPF")) on November 25, 1997. In 2000, Maxus sold a 25% participating interest to AGIP Guyana B.V., which interest was acquired in June 2002 by CGX. As consideration for the 25% participating interest CGX paid \$100,000 up front and agreed to pay an additional \$1,100,000 on the spud of the first well on the Georgetown PPL that targets one of the Tertiary turbidite prospects previously identified by AGIP in which CGX participates. In addition, the original vendor is entitled to a spud bonus in the amount of \$140,000 for each of the first two wells drilled on the license and retains a 2.7% right to ownership of Profit Oil in the licence.

As a result of additional divestitures by Maxus Guyana Ltd., the current ownership of the Georgetown PPL is now: Repsol Exploracion SA (15%), YPF (30%), Tullow Guyana B.V. (30%), and CGX Resources (25%) (collectively the "Partners"). Under the PPL and joint operating agreement between the Partners, Repsol is the operator of the block, which currently comprises 1.7 million acres.

In conjunction with the seismic acquisition program on the Corentyne PPL, the Partners acquired 1,700 kilometres of 2D seismic in 1999. However, due to the border dispute between Guyana and Suriname, exploration activities were suspended in 2000 as a significant portion of the Georgetown PPL was in the area of dispute. Following resolution of the maritime boundary, an additional 1,839 square kilometres of 3D seismic was acquired in 2008/2009 in conjunction with CGX's program on the Corentyne PPL. CGX's share of the acquisition and processing was approximately \$10,000,000.

On February 9, 2012, under the terms of the PPL, Repsol spudded the Jaguar-1 well offshore Guyana. The well will be drilled to 6,500 metres to test a Turonian target; Drilling is slated for 180 days.

Contractual Commitments

The Georgetown PPL entered the second renewal period on November 25, 2009 for a term of three years. The second renewal phase requires the drilling of an exploration well by the end of the term.

The remaining work program on the Georgetown PPL will be fulfilled by the drilling of the Jaguar-1 exploration well to test a Turonian prospect. The Company originally estimated that its share of the costs of drilling the Jaguar-1 well, in which it holds a 25% working interest, would be approximately \$20,000,000. However, as a result of the major oil spill that occurred in the Gulf of Mexico in April 2010, tightening of industry standards, and drilling results of other operators in the Guyana Suriname Basin, the estimate of CGX's share of the cost to drill the Jaguar-1 well increased significantly. As a result, CGX's share of the estimated cost as at December 31, 2011 was US\$40,000,000. As at March 31, 2012, \$17,000,000 has been incurred.

On March 22, 2010, the Company signed a proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's proportionate percentage interest share of the minimum expenditure obligation for the first phase of the second renewal period. The Guarantee is intended to be and shall be construed as a continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of \$2,000,000 and shall remain in force and effect until the end of the first phase of the second renewal period that had been extended to December 31, 2011. The Partners committed to commence an exploration well during the first phase. However, the drill rig was delayed due to weather delays and problems which prevented the rig from moving offshore Suriname on schedule. As a result, the Partners advised the Government of Guyana of the circumstances beyond their control and applied for a deferral of the commitment. The drilling of the Jaguar-1 well began in February 2012.

Pomeroon Petroleum Agreement, Guyana

In January 2004, the Company, through its wholly-owned subsidiary, CGX Resources, entered into an asset purchase agreement with Century Guyana, Ltd. ("Century") to acquire Century's 100% interest in the Pomeroon PA located offshore Guyana. The Government of Guyana approved this transfer in July 2004. The purchase price consisted of a payment of \$100,000 plus the issuance of 2,000,000 common shares of the Company. CGX has assigned to Century an overriding royalty interest consisting of 2.5% of all revenues to the extent that the revenues are directly attributable to the contractor's share of Profit Oil.

The Pomeroon PPL was granted for a period of 10 years and currently covers approximately 2.8 million acres. It is located between CGX's 100%-owned Annex portion of the Corentyne PA and the Venezuela border. Like many maritime boundaries in the world, the border between Venezuela and Guyana has not yet been resolved. It is further complicated by a land border dispute by Venezuela that is being pursued at the diplomatic level, and through the United Nations Good Officer process.

The Company has completed a regional reinterpretation of existing data to identify priority areas for future seismic, however, additional field seismic and exploration drilling has been deferred pending resolution of the maritime boundary between Guyana and Venezuela. Pending that border resolution, exploration activity that would have required physical presence on the Pomeroon PPL to fulfill the terms of the minimum work program have been deemed complete. Under the First Renewal Phase 2, the minimum work program requires the Company to complete either 100 square kilometres of 3D seismic or 500 kilometres of 2D seismic or drill an exploration well. However, at the request of the Government of Guyana, during the period of resolution no work has been performed. An application has been made to the Government of Guyana to extend the term of the contract.

Berbice Petroleum Agreement, Guyana

In 2003, CGX, through ON Energy which was a wholly-owned subsidiary at the time, applied for and was granted the Berbice PPL consisting of approximately 387,000 acres adjacent to the Corentyne onshore PPL. ON Energy has completed aeromag re-interpretation, a geochemical sampling program and a 2D seismic program, to fulfill the minimum work obligations for the initial period from 2003 until 2007. During the First Renewal Period, additional interpretation was completed. Negotiations are underway for the Second Renewal period ending October 2013 to conduct an airborne geotechnical survey at a cost of less than \$1,000,000. ON Energy is also attempting to farm out the minimum work commitments to a third party.

Staging Facility and Wharf, Guyana

CGX is currently in the process of constructing staging facilities to be used for drilling of future wells. To date, the Company has fenced in the yard, constructed an office and sanitary services, installed two fuel tanks that can accommodate 20,000 litres, installed 200 metre by 50 metre of vertical drainage and completed an internal access road with crusher run and sand filling. Crusher run has also been placed in the entire yard. A two kilometre long by 5 metre wide access road has been constructed from the main road to the port yard site using Geotextile, reef sand, white sand, crusher run and bauxite capping. Sand filling of the port yard is currently on going and sea defense is currently being constructed. The Company's investment in the staging facility and wharf is accounted for through its wholly-owned subsidiary Grand Canal Industrial Estates Inc. The Company is currently considering seeking a partner for its investment in the staging facility and wharf.

TRENDS

The economic crisis that started in the financial sector in 2008 and precipitated a global recession stabilized and demonstrated good recovery across most sectors throughout the second half of 2009 and has continued through 2011. Despite a slowdown in world oil consumption during 2011 average crude oil prices in 2011 were significantly higher than in the previous year. Prices averaged \$111.26 per barrel in 2011, about 40% above 2010's average of \$79.50 per barrel. The rebound in oil prices has re-awakened the equity markets and has recently resulted in significant M&A activity, industry consolidation and selective equity financings in the oil and gas sector.

Current financial markets are likely to be volatile in Canada for the early part of 2012, reflecting ongoing concerns about the stability of the global economy, sovereign debt levels and possible default, weakening global growth prospects and instability in Africa and the Middle East. Unprecedented uncertainty in the credit markets has also led to increased difficulties in borrowing/raising funds. Companies worldwide continue to be affected by these trends.

The future performance of the Company is largely tied to the exploration and development of the properties in Guyana. The Company may have difficulties raising equity or debt financing for the purpose of carrying out exploration and development activities with respect to its Guyana properties particularly without excessively diluting present shareholders of the Company. See "Risk Factors".

ADOPTION OF INTERNATIONAL FINANCIAL REPORTING STANDARDS ("IFRS")

On January 1, 2011, the Company adopted IFRS for financial reporting purposes, using a transition date of January 1, 2010. The audited consolidated financial statements for the years ended December 31, 2011 and 2010, have been prepared in accordance with IFRS 1, First-time Adoption of International Financial Reporting Standards, as issued by the International Accounting Standards Board ("IASB"). Previously, the Company prepared its annual consolidated financial statements in accordance with previous Canadian generally accepted accounting principles ("Previous Canadian GAAP"). Unless otherwise noted, 2010 comparative information has been prepared in accordance with IFRS. The adoption of IFRS did not have a material impact on the Company's operations, strategic decisions or funds flow from operations.

RESULTS OF OPERATIONS

Three Month Period Ended December 31, 2011

The Company incurred a net loss of \$1,764,324, or \$0.01 a share for the three month period ended December 31, 2011, compared with a net loss of \$2,022,773, or \$0.01 a share for the same period in 2010 for the reasons discussed below.

CGX incurred a foreign exchange gain of \$640,523 for the three month period ended December 31, 2011 compared to \$346,543 in 2010. The difference is due to the changes in the foreign exchange rates during the last fiscal period on balances held in Canadian Dollar bank accounts as the Canadian dollar strengthened significantly against the US dollar. The Canadian dollar rate increase from an opening rate on October 1, 2011 of \$0.9540 to a closing rate on December 31, 2011 of \$0.9833.

General and administration costs increased by \$828,925 to \$1,235,899 in the three month period ended December 31, 2011 from \$406,974 in 2010. These costs were incurred as a result of increased overall operations. The majority of these costs related general office operations and travel costs.

Consulting fees increased by \$547,042 to \$789,001 during the three month period ended December 31, 2011 compared to \$241,959 in 2010. Consulting fees include fees paid to management consultants. These fees increased mainly due to the use of more consultants as a result of the increase in operations as compared to the prior period as well as management consultant bonuses paid out or accrued in the current period.

The Company incurred stock-based compensation during the three month period ended December 31, 2011 of \$451,000 compared to \$1,667,000 for the same period in 2010. Stock-based compensation expenses are recorded based on the valuation of options using the Black-Scholes model. The expense varies based on the number of options issued and/or vested in the period and the underlying assumptions used in the model.

Year Ended December 31, 2011

The Company incurred a net loss of \$6,785,330, or \$0.03 a share for the year ended December 31, 2011, compared with a net loss of \$4,740,489, or \$0.03 a share for the same period in 2010 for the reasons discussed below.

CGX incurred a foreign exchange gain of \$366,593 for the year ended December 31, 2011 compared to \$488,097 in 2010. The difference is due to the changes in the foreign exchange rates during the last fiscal period on balances held in Canadian dollar bank accounts against the US dollar.

The Company had a gain on marketable securities of \$33,934 during the year ended December 31, 2011 compared to a loss of \$92,742 in the same period of 2010. As the Company has sold the majority of its marketable securities in 2011, these gains and losses are not expected to be significant in future periods.

Shareholder information costs increased in the year ended December 31, 2011 by \$119,165 to \$279,957 compared to \$160,792 in the same period in 2010. This amount relates to the costs of issuing press releases, transfer agent fees, investor presentations, and electronic dissemination of information.

General and administration costs increased by \$1,065,098 to \$2,835,899 in the year ended December 31, 2011 from \$1,770,801 in 2010. These costs were incurred as a result of increased overall operations. The majority of these costs related to general office operations in Canada and travel costs. These fees also increased due to the significant increase in the average Canadian dollar for the current year (\$1.011) as compared to last year (\$0.971).

Professional fees for the year ended December 31, 2011 were \$113,348 compared to \$129,986 in the same period of 2010. These fees are expected to be consistent year to year.

Consulting fees increased by \$885,610 to \$1,697,392 during the year ended December 31, 2011 compared to \$811,782 in 2010. Consulting fees include fees paid to management and increased mainly due to the use of more consultants as compared to the prior year and management bonuses paid out in the current year.

The Company incurred stock-based compensation during the year ended December 31, 2011 of \$2,357,000 compared to \$1,927,000 for the same period in 2010. Stock-based compensation expenses are booked based on the valuation of options using the Black-Scholes model. The expense varies based on the number of options issued and or vested in the period and the underlying assumptions used in the model.

Selected Consolidated Financial Information**

The information below should be read in conjunction with the MD&A, the Financial Statements and related notes and other financial information.

Year Ended December 31	2011	2010	2009
			(CDN GAAP)
	\$	\$	\$
Interest Income	97,739	13,692	36,472
Other Income (Expense)	33,934	(92,742)	75,542
Total Revenue	131,673	(79,050)	112,014
Net Loss	6,785,330	4,740,489	3,692,712
Loss Per Share*	\$0.03	\$0.03	\$0.03
Total Assets	170,535,669	81,275,214	43,727,070
Liabilities	10,919,420	1,953,561	813,313

*calculated using weighted average shares outstanding for the period

** During the fourth quarter of 2011, the Company elected to change its IFRS accounting policy for exploration and evaluation expenditures; see "Change to Initial Accounting Policy for Exploration and Evaluation ("E&E") expenditures adopted under IFRS."

** During the fourth quarter of 2011, the Company elected to change its IFRS accounting policy for exploration and evaluation expenditures; see "Change to Initial Accounting Policy for Exploration and Evaluation ("E&E") expenditures adopted under IFRS."

CAPITAL RESOURCES, CAPITAL EXPENDITURES AND LIQUIDITY

As at December 31, 2011, the Company's working capital increased to \$86,364,429 from \$44,447,430 as at December 31, 2010. The Company plans to use this working capital to further exploration on its properties and for general expenses. The drilling of the Jaguar-1 exploration well is estimated to cost \$40,000,000 net to CGX, of which \$9,800,000 has already been spent. The cost of drilling the Eagle-1 exploration well on the Corentyne PPL is estimated to be \$56,000,000, of which \$20,000,000 has already been spent. The cost estimates for both the Jaguar-1 well and the Eagle-1 well are based on preliminary expectation of the costs (including contingency costs) associated with the planning, execution, services, and time to drill the wells and are not fixed costs. The Company currently has sufficient resources and liquidity to complete its planned drilling programs.

CGX is dependent on obtaining future financings for the exploration and development of its properties and for the acquisition of any new projects. There is no assurance that such financings will be available when required, or under terms that are favorable to the Company.

For the year ended December 31, 2011, the Company incurred additions of \$5,447,959 (2010 – \$1,209,466) with respect to a logistics yard and expenditures on a staging facility. The logistics yard was purchased in 2010 for \$385,000 and the balance was expended on planning for the staging area for the shore base facility. The Company signed a 50 year lease for approximately 55 acres on the Berbice River. This is an ideal location for the staging facility to support off-shore drilling activities. Utilizing a local facility will result in significant savings as compared to running the logistics from Trinidad.

RELATED-PARTY TRANSACTIONS AND KEY MANAGEMENT

Key management includes the Company's directors, officers and any consultants with authority and responsibility for planning, directing and controlling the activities of an entity, directly or indirectly. Compensation awarded to key management included:

	December 31, 2011	December 31, 2010
Balances:		
Short-term employee benefits	\$ 2,510,000	\$ 1,177,000
Share based payments – options	1,945,000	1,492,000
Total compensation paid to key management consultants	\$ 4,455,000	\$ 2,669,000

At December 31, 2011, included in trade and other payables is \$547,000 (2010 - \$2,000) due to these key management consultant

CGX Energy Management Corp. (“CGXEMC”)

CGXEMC was incorporated on December 14, 2011. CGXEMC operates under a master services agreement with CGX and provides general administrative and other services at an appropriate arm's length mark-up fee, depending on the nature of the service to the Company and its subsidiaries. This agreement is in place for a period of 10 years commencing on December 15, 2011 and renews automatically for one year successive terms unless terminated sooner.

Effective March 1, 2012, certain members of the management team and Houston based consultants that provided consultancy services under individual consulting agreements with CGX became full time employees of CGXEMC, a wholly-owned subsidiary of CGX. The members of management team were Stephen Hermeston, President and Chief Executive Officer, Michael Stockinger, Chief Operating Officer, Tralisa Maraj, Chief Financial Officer, Dewi Jones, Executive Vice President, Exploration and General Manager and Nadia Heffernan, General Counsel. The terms of employment did not differ materially or significantly upon conversion to employee status.

CONTINGENCIES, CONTRACTUAL OBLIGATIONS, GUARANTEES AND COMMITMENTS

In the normal course of business, the Company has entered into arrangements and incurred obligations that will affect the Company's future operations and liquidity. These commitments primarily relate to work commitments including seismic and drilling activities under the terms of the PPLs. The Company has discretion regarding the timing of capital spending for work commitments, provided that the work is completed within the periods specified in the PPLs or the Company can negotiate extensions of such periods. Details of these commitments and obligations are discussed above under each of the respective Petroleum Agreements (“PAs”). See notes 9, 13 and 19 of the year ended December 31, 2011 and 2010 audited consolidated financial statements for complete listings of commitments.

On March 22, 2010, the Company signed a proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's proportionate percentage interest share of the minimum expenditure obligation for the first phase of the second renewal period on the Georgetown PA (the “Georgetown Guarantee”). The Georgetown Guarantee is intended to be and shall be construed as a continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of \$2,000,000 and shall remain in force and effect until November 25, 2012.

On November 3, 2011, the Company signed an extension on its proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's proportionate percentage interest share of the minimum expenditure obligation for the first phase of the second renewal period on the Corentyne PA (the “Corentyne Guarantee”). The Corentyne Guarantee is intended to be and shall be construed as continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of

\$3,400,000 and shall remain in force and effect until the end of the second renewal period under the agreement which ends on June 24, 2013.

OFF-STATEMENT OF FINANCIAL POSITION ARRANGEMENTS

See “Commitments” above.

DIVIDENDS

The Company has neither declared nor paid any dividends on its common shares. The Company intends to retain its earnings, if any, to finance growth and expand its operation and does not anticipate paying any dividends on its common shares in the foreseeable future.

CHANGES IN ACCOUNTING POLICIES INCLUDING INITIAL ADOPTION

At the date of authorization of the Audited Consolidated Financial Statements as at December 31, 2011, the IASB and IFRIC had issued the following new and revised Standards and Interpretations for future reporting periods. The Company has not yet assessed the impact of these standards and amendments or determined whether it will early adopt them.

- IFRS 9, *Financial Instruments (effective for annual periods beginning on or after January 1, 2015)*, was issued in November 2009 and addresses classification and measurement of financial assets. It replaces the multiple category and measurement models in IAS 39 for debt instruments with a new mixed measurement model having only two categories: amortized cost and fair value through net income (loss). IFRS 9 also replaces the models for measuring equity instruments. Such instruments are either recognized at fair value through net income (loss) or at fair value through other comprehensive income. Where equity instruments are measured at fair value through other comprehensive income, dividends are recognized in net income (loss) to the extent that they do not clearly represent a return of investment; however, other gains and losses (including impairments) associated with such instruments remain in accumulated comprehensive income indefinitely. Requirements for financial liabilities were added to IFRS 9 in October 2010 and they largely carried forward existing requirements in IAS 39, *Financial Instruments – Recognition and Measurement*, except that fair value changes due to credit risk for liabilities designated at fair value through net income (loss) are generally recorded in other comprehensive income
- IFRS 10 ‘*Consolidated Financial Statements*’ – effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, establishes principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities. It requires an entity to consolidate an investee when it has power over the investee, is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Under existing IFRS, consolidation is required when an entity has the power to govern the financial and operating policies of an entity so as to obtain benefits from its activities. IFRS 10 replaces SIC-12, *Consolidation—Special Purpose Entities* and parts of IAS 27, *Consolidated and Separate Financial Statement*.
- IFRS 11 ‘*Joint Arrangements*’ - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, provides for a more realistic reflection of joint arrangements by focusing on the rights and obligations of the arrangement, rather than its legal form. It requires a venturer to classify its interest in a joint arrangement as a joint venture or joint operation. Joint ventures will be accounted for using the equity method of accounting whereas for a joint operation the venturer will recognize its share of the assets, liabilities, revenue and expenses of the joint operation. Under existing IFRS, entities have the choice to proportionately consolidate or equity account for interests in joint ventures. IFRS 11 supersedes IAS 31, *Interests in Joint Ventures*, and SIC-13, *Jointly Controlled Entities—Non-monetary Contributions by Venturers*.
- IFRS 12 ‘*Disclosure of Interests in Other Entities*’ - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, requires the disclosure of information that enables users of financial statements to evaluate the nature of, and risks associated with its interests in other entities and the effects of those interests on its financial position, financial performance and cash flows.

- IFRS 13 '*Fair Value Measurement*' - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, provides the guidance on the measurement of fair value and related disclosures through a fair value hierarchy. The new standard clarifies that fair value is the price that would be received to sell an asset, or paid to transfer a liability in an orderly transaction between market participants, at the measurement date. Under existing IFRS, guidance on measuring and disclosing fair value is dispersed among the specific standards requiring fair value measurements and does not always reflect a clear measurement basis or consistent disclosures.
- IAS 1 '*Presentation of Financial Statements*' - the IASB amended IAS 1 with a new requirement for entities to group items presented in other comprehensive income on the basis of whether they are potentially reclassifiable to profit or loss.
- IAS 12, *Income Taxes*, was amended to introduce an exception to the existing principle for the measurement of deferred tax assets or liabilities arising on investment property measured at fair value. As a result of the amendment, there is a rebuttable presumption that the carrying amount of the investment property will be recovered through sale when considering the expected manner or recovery or settlement. SIC 21, *Income Taxes - Recovery of Revalued Non-Depreciable Assets*, will no longer apply to investment properties carried at fair value. The amendment also incorporates into IAS 12 the remaining guidance previously contained in SIC 21, which is withdrawn. The amendment is effective for annual periods beginning on or after July 1, 2012 with earlier application permitted.
- IAS 19 '*Employee Benefits*' - a number of amendments have been made to IAS 19, which included eliminating the use of the "corridor" approach and requiring remeasurements to be presented in OCI. The standard also includes amendments related to termination benefits as well as enhanced disclosures.
- IAS 27 '*Separate Financial Statements*' - as a result of the issue of the new consolidation suite of standards, IAS 27 has been reissued, as the consolidation guidance will now be included in IFRS 10. IAS 27 will now only prescribe the accounting and disclosure requirements for investments in subsidiaries, joint ventures and associates when an entity prepares separate financial statements.
- IAS 28 '*Investments in Associates and Joint Ventures*' - as a consequence of the issue of IFRS 10, IFRS 11 and IFRS 12, IAS 28 has been amended and will provide the accounting guidance for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures. The amended IAS 28 will be applied by all entities that are investors with joint control of, or significant influence over, an investee.
- IAS 32 '*Financial Instruments, Presentation*' – In December 2011, IAS 32 was amended to clarify the requirements for offsetting financial assets and liabilities. The amendments clarify that the right of offset must be available on the current date and cannot be contingent on a future date.

ADDITIONAL DISCLOSURE FOR VENTURE ISSUERS WITHOUT SIGNIFICANT REVENUE

DISCLOSURE OF OUTSTANDING SHARE DATA

Share Capital

The following table sets forth information concerning the outstanding securities of the Company as at April 30, 2012:

Common Shares of no par value	Number
Shares	326,233,933
Options	17,664,730

See note 16 to the audited consolidated financial statements for the years ended December 31, 2011 and 2010 for more detailed disclosure of outstanding shares data.

RISKS AND UNCERTAINTIES

Overview

The business of the Company consists of oil and gas exploration in Guyana, South America. There are a number of inherent risks associated with oil and gas exploration and development, as well as local, national and international economic and political conditions that may affect the success of CGX which are beyond CGX's control, particularly since such operations are located in a foreign country. Many of these factors involve a high degree of risk which a combination of experience, knowledge and careful evaluation may not overcome.

CGX has prioritized the risk factors. Readers are cautioned that this categorization is a subjective view of the Company and the categorization of these risk factors could change subject to future events.

Stage of Development

An investment in CGX is subject to certain risks related to the nature of CGX's business and its early stage of development. There are numerous factors which may affect the success of CGX's business which are beyond CGX's control including local, national and international economic and political conditions. CGX's business involves a high degree of risk which a combination of experience, knowledge and careful evaluation may not overcome. CGX's operations in Guyana have exposed CGX to risks which may not exist for domestic operations such as political and currency risks. CGX has a limited history of operations and there can be no assurance that CGX's business will be successful or profitable or that additional commercial quantities of oil and/or natural gas will be discovered by CGX. CGX has not paid any dividends and it is unlikely to pay dividends in the immediate or foreseeable future.

Risks of Foreign Operations

CGX's material petroleum assets and operations are located in Guyana. As such, CGX is subject to political, economic, and contractual uncertainties, including, but not limited to, renegotiation or nullification of existing agreements and licences, expropriation of property without fair compensation, changes in energy policies or the personnel administering them, nationalization, currency fluctuations and devaluations, exchange controls and royalty and tax increases, changes in taxation policies, economic sanctions and other risks arising out of foreign governmental sovereignty over the areas in which CGX's operations are conducted.

CGX's operations may also be adversely affected by laws and policies of Canada affecting foreign trade, investment, and taxation, including proposed amendments to the Tax Act relating to the taxation of foreign affiliates recently announced on August 19, 2011.

In the event of a dispute arising in connection with CGX's operations in Guyana, CGX may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdictions of the courts of Canada or enforcing Canadian judgments in such other jurisdictions. CGX may also be hindered or prevented from enforcing its rights with respect to a governmental instrumentality because of the doctrine of sovereign immunity. Accordingly, CGX's exploration and development activities in Guyana could be substantially affected by factors beyond CGX's control, any of which could have a material adverse effect on CGX.

Expiry and/or Termination of Petroleum Agreements and Licences

CGX's interests are held by way of participating interests in PPLs governed by PAs. If CGX, or its joint licensees under an applicable PA or licence, fails to meet the specific requirement(s) of a particular PA or licence its interest may terminate or expire. There can be no assurance that any of the obligations required to maintain the Company's interests will be met and that CGX will not lose any of its participating interests in such petroleum agreements and licences.

With respect to the Corentyne, Annex, Pomeroon, Berbice and Georgetown PPLs held by the Company, annual lease rental payments were submitted as required to the applicable regulatory authority and on September 20, 2011, the Guyana Geology & Mines Commission issued a comfort letter confirming that each of the PPLs are in good standing.

With respect to the Georgetown PPL, the licence is the Second Renewal Period, which expires on November 25, 2012. The Second Renewal Period was initially split into Phase 1 and Phase 2, respectively. Phase 1 required the drilling of one exploration well by May 25, 2011. An Addendum to the Georgetown Petroleum Agreement dated September 28, 2011, extended the Phase 1 obligation to commence drilling to December 31, 2011 and the Atwood Beacon Rig arrived on December 5, 2011 to commence drilling operations. The well is currently drilling and is expected to reach total depth 180 days from the February 9, 2012 spud date.

Upon issuing the extension for Phase 1 with respect to the Georgetown PPL, the Minister reduced the 18 month duration of Phase 2 by the term of the Extension to Phase 1. Phase 2 expires on November 25, 2012. At the end of Phase 2, the Parties shall elect to relinquish the "Prospecting Area", except any "Discovery Area" (each as defined in the Georgetown PPL) or any area subject to a petroleum production licence.

With respect to the Corentyne PPL, the licence is in its second renewal period, which expires on June 24, 2013. The Corentyne Second Renewal Period is split into Corentyne Phase 1 and Corentyne Phase 2, respectively. Corentyne Phase 1 requires the Company to drill one exploration well by December 24, 2011. The Company advised the Minister that it was in the process of bringing a separate drill rig to Guyana and would not be in a position to drill the well by December 24, 2011. Upon execution of the rig contract to drill the Eagle-1 well, the Government of Guyana granted a deferral of the phase 1 drilling commitment into Phase 2 of the second renewal period. The Eagle-1 well is currently drilling and expected to be completed within second quarter of 2012. Upon completion of the Eagle-1 well, one additional commitment well remains to be drilled before June 24, 2013. The Company's ability to meet this well commitment is impacted by the Company's ability to raise the required capital - refer to discussions below on "Significant Capital investments and Expenses" and "Financing".

Corentyne Phase 2 expires on June 24, 2013. At the end of Corentyne Phase 2, the Company shall elect to relinquish the "Contract Area", except any "Discovery Area" (each as defined in the Corentyne PPL) or any area subject to a petroleum production licence.

Financing

The Company's future capital requirements on its existing assets will likely exceed existing cash resources, which will require CGX to raise additional financing. The ability of CGX to arrange such financing in the future will depend in part upon the prevailing capital market conditions as well as the business performance of CGX. This in turn could limit growth prospects in the short run or may even require CGX to dedicate cash flow, dispose of properties or raise new equity to continue operations under circumstances of declining energy prices, disappointing drilling results, or economic or political dislocation in foreign countries. There can be no assurance that CGX will be successful in its efforts to arrange additional financing on terms satisfactory to CGX. This may be further complicated by the limited market liquidity for shares of smaller companies, restricting access to some institutional investors. If additional financing is raised by the issuance of shares from the treasury of CGX, control of CGX may change and shareholders may suffer additional dilution.

From time to time CGX may enter into transactions to acquire assets or the shares of other corporations. These transactions may be financed partially or wholly with debt, which may temporarily increase CGX's debt levels above industry standards.

Petroleum Exploration Operations

An investment in CGX is subject to certain risks related to the nature of CGX's business as an oil and gas exploration company. Petroleum exploration involves a high degree of risk and there is no assurance that expenditures made on exploration activities by CGX will result in the discovery or ultimate production of hydrocarbons. It is often difficult to project the costs of undertaking exploratory drilling programs due to the inherent uncertainties of drilling in unknown formations, the costs associated with encountering various drilling conditions such as over-pressured zones and tools lost in the hole, and changes in drilling plans and locations as a result of prior exploratory wells or additional technical data and interpretations. CGX does not know if any of its exploration prospects will contain petroleum in quantities or quality that are sufficient to recover the costs of drilling and exploration, or to be economically viable.

Currently there are no reserves associated with CGX's petroleum licences in Guyana. CGX has identified exploration prospects based on seismic and geological information that indicates the possible presence of petroleum. However, the areas in which CGX has decided to drill may not produce petroleum in commercial quantities or quality, or may not discover petroleum at all. The future value of CGX is therefore dependent on the success or otherwise of CGX's activities which are principally directed toward the further exploration, appraisal and development of its assets in Guyana. CGX has a right to explore and appraise such assets in Guyana but does not have a right to produce same until such time as the reserves are determined to be commercial. Exploration, appraisal and development of petroleum reserves is speculative and involves a significant degree of risk. There is no guarantee that exploration or appraisal of the Guyana assets will lead to a commercial discovery or, if there is commercial discovery, that CGX will be able to realize such reserves as intended. Not all properties that are explored are ultimately produced. If at any stage CGX is precluded from pursuing its exploration or development programs, or such programs are otherwise not continued, CGX's business, financial condition and/or results of operations and, accordingly, the trading price of the common shares, is likely to be materially adversely affected.

Offshore Operations

CGX is actively exploring for hydrocarbons offshore the coast of Guyana. Offshore operations involve a higher degree of risk than onshore operations due to the remoteness. Fires and explosions on drilling rigs and other offshore platforms are more likely to result in personal injury, loss of life and damage to property due to the remote locations and time required for rescue personnel to get to the location. Blow-outs and spills are more likely to result in significant environmental damage to the marine environment and can be difficult to contain and difficult and expensive to remediate. Although CGX intends to operate in accordance with all recommended and required health, safety and environment practices which will reduce such risks, there can be no assurance that these risks can be avoided. The occurrence of any of these events could have a materially adverse effect on the Company.

Drilling Risks and Other Operating Risks

CGX's operations are subject to all the operational risks inherent to offshore exploration and development of hydrocarbons and the drilling of wells, including among others, unsatisfactory performance of service providers engaged to carry out operations required for the drilling and analysis of wells, natural disasters, encountering unexpected formations or pressures, premature declines of reservoirs, invasion of water into producing formations, formations with abnormal pressures, mechanical problems with equipment, potential for substantial environmental damage, blow-outs, cratering, fires and spills, all of which could result in personal injuries, loss of life and damage to the property of CGX and others. In accordance with industry practice, CGX has normal and customary insurance coverage to address certain of these risks; however, such insurance in the future may not be available, may be price-prohibitive or contain limitations on liability that may not be sufficient to cover the full extent of such liabilities. While management of CGX believes that the respective insurance coverage will be sufficient, there can be no assurance that CGX will be fully covered by such insurance. In addition, such risks may not in all circumstances be insurable or, in certain circumstances, CGX may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or other reasons. The payment of such uninsured liabilities would reduce the funds available to CGX. CGX obtains insurance for its operations, as appropriate for each specific activity. It also generally insists that subcontractors have insurance sufficient to cover their own people and property and to indemnify CGX for such claims. CGX further requires that all subcontractors provide CGX with verified certificates of insurance for all operations for which they have been contracted by CGX. CGX obtains insurance to the extent it deems necessary based on advice from its insurance professionals and generally accepted industry practice.

CGX has health, safety and environmental policies that it applies to all operations. It also insists that contractors have verifiable health, safety and environmental standards, policies and documented implementation that attempt to reduce the possibility and size of insurance claims.

The occurrence of a significant event that CGX is not fully insured against, or the insolvency of the insurer of such event, could have a material adverse effect on CGX's financial position and/or its results of operations.

Significant Capital Investments and Expenses

The oil and gas exploration and production industry is capital intensive and as such the Company expects to have substantial expenditures as we continue to fulfill our commitments and explore for petroleum reserves. CGX has financed the exploration activities with funds obtained from the private placements conducted in 2011 and 2010. CGX continues to explore financing mechanisms to allow the Company to meet future work commitments and to allow us to fully explore the existing petroleum prospecting licenses.

Our future cash flow for operations and financing is subject to a number of variables, including among others: (i) the outcome of our current well program; (ii) our ability to locate or acquire reserves; (iii) our ability to extract oil from such reserves; (iv) the cost and the timeframes for government authorizations and/or licence extensions; (v) current financial market conditions and available liquidity with such markets (refer to “Financing” below); and (vi) the prices for which any produced oil is sold.

Seismic Data and Resource Estimates

There are numerous uncertainties inherent in estimating quantities of resources, including many factors beyond the control of the Company. When properly used and interpreted, seismic data and visualization techniques are important tools used to assist geoscientists in identifying sub-surface structures and indicators of hydrocarbons; however, these data do not allow the Company to know whether the hydrocarbons are effectively present in the structures. Estimates of resources depend largely upon the reliability of available geological and engineering data and require certain assumptions to be made in order to assign resource volumes. Geological and engineering data is used to determine the probability that a reservoir of oil and/or natural gas exists at a particular location, and whether, and to what extent, such hydrocarbons are recoverable from the reservoir. Accordingly, the ultimate resources discovered by the Company may be significantly less than its estimates.

There is also no guarantee that the prospective resources attributed to each of the Company's PPLs will be discovered or become commercially viable. The Company's drilling activities may not be successful or may not be economically viable which may have a material adverse effect on the Company's share price.

Reserves and prospective resources involve different risks associated with achieving commerciality. To be classified as reserves, estimated recoverable quantities must be associated with a project that has demonstrated commercial viability. In estimating reserves, the chance of commerciality is effectively 100%. For prospective resources, the chance of commerciality will be the product of the chance that a project will result in the discovery of petroleum and the chance that an accumulation will be commercially developed. By definition, reserves are commercially (and hence economically) recoverable. There is no guarantee that the prospective resources attributed to each of the Company PPLs will be discovered or become commercially viable.

Future Development

Development of any potential discovery may be affected by increased costs, the excessive costs of capital, political or environmental factors. For example the unavailability or high cost of drilling rigs, or other essential equipment, material or personnel could negatively impact the ability of the Company to economically develop future reserves. Additionally engineering complications, political events or natural disasters could delay or prevent a development project. Additionally, the cost of budgeting for such projects may be difficult.

Negative Operating Cash Flow

The Company had negative operating cash flow for its financial years ended December 31, 2011 and 2010. Until at least such time as the Company is able to produce oil and gas from its reserves and resources, the Company does not expect to have any positive cash flow. To the extent that the Company has negative cash flow in future periods, the Company may need to deploy a portion of its cash reserves to fund such negative cash flow.

Common Share Price Volatility

A number of factors could influence the volatility in the trading price of the common shares, including changes in the economy or in the financial markets, industry related developments, and the impact of changes in CGX's daily operations. Each of these factors could lead to increased volatility in the market price of the common shares. In addition, variations in earnings estimates by securities analysts and the market prices of the securities of CGX's competitors may also lead to fluctuations in the trading price of the common shares.

Recent Distress in Financial Markets

In the future, the Company may require debt financing to grow its business. The recent distress affecting the financial markets and the possibility that financial institutions may consolidate or go bankrupt has reduced levels of activity in the credit markets. This could diminish the amount of financing available to companies. In addition, such turmoil in the financial markets could significantly increase the Company's costs associated with borrowing. The Company's liquidity and its ability to access the credit or capital markets may also be adversely affected by changes in the financial markets and the global economy. Continuing turmoil in the financial markets could make it more difficult for the Company to access capital, sell assets, refinance existing indebtedness, enter into agreements for new indebtedness or obtain funding through the issuance of securities. In addition, there could be a number of follow-on effects from the credit crisis on the Company, including insolvency of customers, key suppliers and other counterparties to the Company and foreign exchange derivative instruments.

Banks have been adversely affected by the worldwide economic crisis and have severely curtailed existing liquidity lines, increased pricing and introduced new and tighter borrowing restrictions to corporate borrowers, with extremely limited access to new facilities or for new borrowers. These factors could negatively impact the Company's ability to access liquidity needed for the Company's business in the longer term.

Global Economic Downturn

In the event of a continued general economic downturn or a recession, there can be no assurance that the business, financial condition and results of operations of the Company would not be materially adversely affected.

Current global financial conditions have been subject to increased volatility and numerous commercial and financial enterprises have either gone into bankruptcy or creditor protection or have had to be rescued by governmental authorities. Access to public financing has been negatively impacted by sub-prime mortgage defaults in the United States, the liquidity crisis affecting the asset-backed commercial paper and collateralized debt obligation markets, massive investment losses by banks with resultant recapitalization efforts and deterioration in the global economy. Although economic conditions improved towards the latter portion of 2009 through 2011, as anticipated, the recovery from the recession since then has been slow in various jurisdictions including in Europe and the United States and has been impacted by various ongoing factors including sovereign debt levels and high levels of unemployment which continue to impact commodity prices and have resulted in high volatility in the stock market.

Petroleum prices are expected to remain volatile for the near future as a result of market uncertainties over the supply and demand of these commodities due to the current state of the world economies, OPEC actions and the ongoing global credit and liquidity concerns.

These factors may impact the Company's ability to obtain equity, debt or bank financing on terms commercially reasonable to the Company, or at all. Additionally, these factors, as well as other related factors, may cause decreases in asset values that are deemed to be other than temporary, which may result in impairment losses. If these increased levels of volatility and market turmoil continue, the Company's operations could be adversely impacted and the trading price of the Company's securities could continue to be adversely affected.

Industry Conditions

The marketability and price of oil and natural gas which may be acquired or discovered by CGX will be affected by numerous factors beyond the control of CGX. The ability of CGX to market its oil and natural gas discovered may depend upon its ability to access third party transportation, processing facilities and acquiring space on pipelines which deliver oil and natural gas to commercial markets. CGX is also subject to market fluctuations in the prices of petroleum, uncertainties related to the delivery and proximity of its reserves to pipelines and processing facilities, operational problems with such pipelines and facilities and extensive government regulation relating to prices, taxes, royalties, land tenure, allowable production, the export of petroleum and many other aspects of the petroleum business.

The petroleum industry is subject to varying environmental regulations in each of the jurisdictions in which CGX may operate. Environmental regulations place restrictions and prohibitions on emissions of various substances produced concurrently with petroleum and can impact on the selection of drilling sites and facility locations, potentially resulting in increased capital expenditures. CGX may be responsible for abandonment and site restoration costs.

Infrastructure development in Guyana where the Company operates is limited. These factors may affect the Company's ability to explore and develop its properties in a timely manner and to store and transport its petroleum production if reserves are located.

Foreign Subsidiaries

CGX conducts operations through its Bahamian, Guyanese and Barbadian subsidiaries. Therefore, to the extent of operations conducted by such subsidiaries, CGX will be dependent on the cash flows of these subsidiaries to meet its obligations. The ability of its subsidiaries to make payments to CGX may be constrained by: (i) the level of taxation, particularly corporate profits and withholding taxes, in the jurisdiction in which the subsidiary operates and any changes in tax laws or treaties; and (ii) the introduction of exchange controls or repatriation restrictions or the availability of hard currency to be repatriated.

Need to Add Reserves

CGX's ability to achieve commercial production, and therefore its cash flows and earnings, are highly dependent upon CGX discovering or acquiring reserves. To the extent that cash flow from operations is insufficient and external sources of capital become limited or unavailable, CGX's ability to make the necessary capital investments to expand its petroleum reserves will be impaired. There can be no assurance that CGX will be able to find and develop or acquire reserves at commercially feasible costs.

Assessments of Value of Acquisitions

Acquisitions of petroleum companies and petroleum assets are typically based on engineering and economic assessments made by independent engineers and the acquiror's own assessments. These assessments will include a series of assumptions regarding such factors as recoverability and marketability of petroleum, future prices of petroleum and operating costs, future capital expenditures and royalties and other government levies which will be imposed over the producing life of the reserves. Many of these factors are subject to change and are beyond CGX's control. In particular, the prices of, and markets for, petroleum products may change from those anticipated at the time of making such assessment. In addition, all such assessments involve a measure of geologic and engineering uncertainty which could result in lower production and reserves than anticipated. Initial assessments of acquisitions may be based on reports by a firm of independent engineers that are not the same as the firm that CGX may use for its year-end resource and reserve evaluations. Because each of these firms may have different evaluation methods and approaches, these initial assessments may differ significantly from the assessments of the firm used by CGX. Any such instance may offset the return on and value of the offered shares.

Environmental Regulation and Risks

Extensive national, state and local environmental laws and regulations in foreign jurisdictions affect nearly all of the operations of CGX. These laws and regulations set various standards regulating certain aspects of health and environmental quality, provide for penalties and other liabilities for the violation of such standards and establish in certain circumstances obligations to remediate current and former facilities and

locations where operations are or were conducted. In addition, special provisions may be appropriate or required in environmentally sensitive areas of operation. There can be no assurance that CGX will not incur substantial financial obligations in connection with environmental compliance and that the cost of such compliance will not have a material adverse affect on CGX.

Significant liability could be imposed on CGX for damages, cleanup costs or penalties in the event of certain discharges into the environment, environmental damage caused by previous owners of properties purchased by CGX or non-compliance with environmental laws or regulations. Such liability could have a material adverse effect on CGX. Moreover, CGX cannot predict what environmental legislation or regulations will be enacted in the future or how existing or future laws or regulations will be administered or enforced. Compliance with more stringent laws or regulations, or more vigorous enforcement policies of any regulatory authority, could in the future require material expenditures by CGX for the installation and operation of systems and equipment for remedial measures, any or all of which may have a material adverse effect on CGX.

Environmental Protection

All phases of CGX's operations are subject to environmental regulation in the various jurisdictions in which it operates. These regulations mandate, among other things, the maintenance of air and water quality standards and land reclamation. They also set forth limitations on the generation, transportation, storage and disposal of solid and hazardous waste.

In particular, CGX is subject to the Environmental Act which provides for the management, conservation, protection and improvement of the environment, the prevention/control of pollution, the assessment of the impact of economic development on the environment and the sustainable use of natural resources and the matters incidental thereto or connected therewith. This legislation also mandates the creation of the Guyana Environmental Protection Agency (the "EPA") to implement compliance with the Environmental Act.

The Environmental Act establishes a wide range of sanctions and penalties, both criminal and civil, for violations of the provisions of the Environmental Act. These sanctions and penalties include, but are not limited to:

- varying monetary fines or imprisonment depending on the gravity of the offence (if the offender has been convicted of an offence under the Environmental Act and has benefited monetarily from the violation, a court may order a fine in an amount equal to the court's estimation of the amount of monetary benefits notwithstanding the maximum fine that may be imposed. To expedite settlement, authorized officers of the EPA, may by notice, offer the option of discharging liabilities in consideration of the offender making immediate payment to the EPA equal to two-thirds of the minimum penalty prescribed within 28 days of the date of the notice sent by the officer);
- suspension, cancellation or revocation of a permit or authorisation;
- order to cease (or make no changes to) construction, operation, or other activities;
- prohibition notices (similar to an injunction);
- enforcement notices;
- mandating actions to prevent, ameliorate, correct, mitigate, restore or otherwise address environmental harm within a specified time;
- community service;
- order compensation to aggrieved persons; and
- injunctions (upon application to the High Court of Guyana).

To date, applicable environmental legislation has had no material financial or operational effects upon the operations of CGX.

Operational Dependence

Other companies operate some of the PPLs in which the Company has an interest. As a result, the Company will have limited ability to exercise influence over the operation of those activities or their associated costs, which could adversely affect the Company's financial performance. The Company's return on interests operated by others therefore depends upon a number of factors that may be outside of

the Company's control, including the timing and amount of capital expenditures, the operator's expertise and financial resources, the approval of other participants, the selection of technology and risk management practices.

Political Risks

The majority of CGX's current operations are presently conducted in Guyana, South America and as such, CGX's operations are exposed to various levels of political, economic and other risks and uncertainties. These risks and uncertainties vary from country to country and include, but are not limited to: currency exchange rates; high rates of inflation; labour unrest; border disputes between countries; renegotiation or nullification of existing concessions, licences, permits and contracts; changes in taxation policies; restrictions on foreign exchange; and changing political conditions; currency controls and governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction.

Future political actions cannot be predicted and may adversely affect CGX. Changes, if any, in petroleum or investment policies or shifts in political attitude in the country of Guyana and border disputes affecting CGX's rights to explore and develop for oil and gas may adversely affect CGX's business, results of operations and financial condition. Future operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, income taxes, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people and water use. The possibility that future governments may adopt substantially different policies, which may extend to the expropriation of assets, cannot be ruled out.

Failure to comply strictly with applicable laws or regulations relating to the petroleum regime, could result in loss, reduction or expropriation of entitlements. The occurrence of these various factors and uncertainties cannot be accurately predicted and could have an adverse effect on CGX's consolidated business, results of operations and financial condition.

Regulatory

Petroleum operations are subject to extensive controls and regulations imposed by various levels of government that may be amended from time to time such as extensive government regulation relating to price, taxes, royalties, land tenure, allowable production, the export of petroleum and many other aspects of the petroleum business. CGX's operations may require licences and permits from various governmental authorities. There can be no assurance CGX will be able to obtain all necessary licences and permits that may be required to carry out exploration and development at its projects. It is not expected that any of these controls or regulations will affect the operations of CGX in a manner materially different than they would affect other petroleum companies of similar size.

Title to Properties and Assets

Title reviews have been conducted on CGX's existing properties and to the knowledge of CGX, CGX does have good title to its existing properties and in accordance to industry standards title reviews are conducted prior to the purchase of most petroleum producing properties or the commencement of drilling wells. Such reviews do not guarantee or certify that an unforeseen defect in the chain of title will not arise to defeat the claim of CGX which could result in the loss of title and a reduction of the revenue received by CGX.

Third Party Credit Risk

CGX is or may be exposed to third party credit risk through its contractual arrangements with its current or future joint venture partners, or other parties. In the event such entities fail to meet their contractual obligations to CGX, such failures could have a material adverse effect on CGX and its cash flow from operations.

Fluctuations in Foreign Currency Exchange Rates

All of CGX's operations are located in foreign jurisdictions. Fluctuations in the United States dollar and the Guyanese dollar exchange rates may cause a negative impact on revenue and costs and could have a material adverse impact on CGX's operations.

Competition

Competition could adversely affect CGX's performance. The petroleum industry is characterized by intense competition and CGX competes directly with other companies that have greater technical and financial resources. Many of these competitors not only explore for and produce petroleum but also carry on refining operations and market petroleum and other products on an international basis. The industry also competes with other industries who supply non-petroleum energy products.

Potential Conflicts of Interest

There are potential conflicts of interest to which some of the directors and officers of CGX will be subject in connection with the operations of CGX. Some of the directors and officers are engaged and will continue to be engaged in the search of petroleum interests on their own behalf and on behalf of other corporations, and situations may arise where the directors and officers will be in direct competition with CGX. Conflicts of interest, if any, which arise will be subject to and be governed by procedures prescribed by the *Business Corporations Act* (Ontario) which requires a director or officer of a corporation who is a party to or is a director or an officer of or has a material interest in any person who is a party to a material contract or proposed material contract with CGX, to disclose his interest and to refrain from voting on any matter in respect of such contract unless otherwise permitted under the *Business Corporations Act* (Ontario).

Availability of Personnel and Equipment

The competition for qualified personnel in the petroleum industry is intense and there can be no assurance that CGX will be able to continue to attract and retain all personnel necessary for the development and operation of its business. Investors must rely upon the ability, expertise, judgment, discretion, integrity and good faith of the management of CGX, as the case may be.

Petroleum exploration and development activities are dependent on the availability of drilling and related equipment in the particular areas where such activities will be conducted. Demand for a rig suitable for the contemplated drilling activities of the Company or access restrictions may affect the availability of such equipment to the Company and may delay exploration and development activities.

CRITICAL ACCOUNTING POLICIES

Basis of Consolidation

The consolidated financial statements include the financial statements of the Company together with its wholly owned subsidiaries CGX Resources, 1524555 Alberta Limited, an Alberta registered company GCIE Holdings Limited, a Barbados registered company, CGX Energy Management Corp., a Delaware, US registered company as well as its 62% interest in ON Energy Inc., a Guyana-based company.

CGX Energy Management Corp is a wholly-owned subsidiary of CGX Energy Inc. incorporated on December 14, 2011.

The results of subsidiaries acquired or disposed of during the year are included in the consolidated statement of comprehensive loss from the effective date of acquisition or up to the effective date of disposal, as appropriate.

All intra-Company transactions, balances, income and expenses are eliminated in full on consolidation. Non-controlling interests in the net assets of consolidated subsidiaries are identified separately from the Company's equity therein. Non-controlling interests consist of the amount of those interests at the date of the original business combination and the non-controlling interests' share of changes in equity since the date of the combination. Losses applicable to the non-controlling interests in excess of their interest in the subsidiary's equity are allocated against the interests of the Company except to the extent that the non-controlling interests have a binding obligation and are able to make an additional investment to cover the losses. As at December 31, 2011 and 2010, the non-controlling interests had a value of \$Nil.

Exploration and Evaluation Expenditures

All license acquisition, exploration and appraisal costs of technical services and studies, seismic acquisition, exploratory drilling and testing are initially capitalized by well, field, unit of account or specific

exploration unit as appropriate. Expenditures incurred during the various exploration and appraisal phases are carried forward, until the existence of commercial reserves and when the technical feasibility and commercial viability are demonstrable and approved by regulator. If commercial reserves have been discovered and technical feasibility and commercial viability are demonstrable, the carrying value of the exploration and evaluation assets, after any impairment loss, is reclassified as oil and gas properties. If technical feasibility and commercial viability cannot be demonstrated upon completion of the exploration phase, the carrying value of the exploration and evaluation costs incurred are expensed in the period this determination is made.

Exploration and evaluation assets are tested for impairment when indicators of impairment are present and when exploration and evaluation assets are transferred to oil and gas properties. The Company has determined the level for assessing for impairment at the cash-generating unit level.

Decommissioning, Restoration and Similar Liabilities (“Asset Retirement Obligation” or “ARO”)

The Company recognizes liabilities for statutory, contractual, constructive or legal obligations, including those associated with the reclamation of petroleum and natural gas and property, plant and equipment (“PP&E”), when those obligations result from the acquisition, construction, development or normal operation of the assets. Initially, a liability for an asset retirement obligation is recognized at its fair value in the period in which it is incurred. Upon initial recognition of the liability, the corresponding asset retirement obligation is added to the carrying amount of the related asset and the cost is amortized as an expense over the economic life of the asset using either the unit-of-production method or the straight-line method, as appropriate. Following the initial recognition of the asset retirement obligation, the carrying amount of the liability is increased for the passage of time and adjusted for changes to the current market-based discount rate, amount or timing of the underlying cash flows needed to settle the obligation.

Loss per Share

The basic loss per share is computed by dividing the net loss by the weighted average number of common shares outstanding during the period. The diluted loss per share reflects the potential dilution of common share equivalents, such as outstanding stock options, in the weighted average number of common shares outstanding during the year, if dilutive. The “treasury stock method” is used for the assumed proceeds upon the exercise of the options and warrants that are used to purchase common shares at the average market price during the year. During the years ended December 31, 2011 and 2010 all the outstanding stock options were antidilutive.

Share Based Payments

Employees (including directors and senior executives) of the Company receive a portion of their remuneration in the form of share-based payment transactions, whereby employees render services as consideration for equity instruments (“equity-settled transactions”).

In situations where equity instruments are issued and some or all of the goods or services received by the entity as consideration cannot be specifically identified, they are measured at fair value of the share-based payment.

The costs of equity-settled transactions with employees are measured by reference to the fair value at the date on which they are granted.

The costs of equity-settled transactions are recognized, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled, ending on the date on which the relevant employees become fully entitled to the award (“the vesting date”). The cumulative expense is recognized for equity-settled transactions at each reporting date until the vesting date reflects the Company’s best estimate of the number of equity instruments that will ultimately vest. The profit or loss charge or credit for a period represents the movement in cumulative expense recognized as at the beginning and end of that period and the corresponding amount is represented in share option reserve.

No expense is recognized for awards that do not ultimately vest, except for awards where vesting is conditional upon a market condition, which are treated as vesting irrespective of whether or not the market condition is satisfied provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, the minimum expense recognized is the expense as if the terms had not been modified. An additional expense is recognized for any modification which increases the total fair value of the share-based payment arrangement, or is otherwise beneficial to the employee as measured at the date of modification.

The dilutive effect of outstanding options is reflected as additional dilution in the computation of earnings per share.

Property, Plant and Equipment

PP&E are stated at cost less accumulated amortization and accumulated impairment losses. The cost of an item of PP&E consists of the purchase price, any costs directly attributable to bringing the asset to the location and condition necessary for its intended use and an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located.

Amortization is provided at rates calculated to write off the cost of PP&E, less their estimated residual value, using the declining balance at the following rates:

Office, furniture and fixtures	20%
Computer, software and equipment	30%

An item of PP&E is derecognized upon disposal, when held for sale or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on disposal of the asset, determined as the difference between the net disposal proceeds and the carrying amount of the asset, is recognized in the consolidated statement of comprehensive income.

The Company conducts an annual assessment of the residual balances, useful lives and amortization methods being used for PP&E and any changes arising from the assessment are applied by the Company prospectively.

Where an item of plant and equipment comprises major components with different useful lives, the components are accounted for as separate items of plant and equipment. Expenditures incurred to replace a component of an item of property, plant and equipment that is accounted for separately, including major inspection and overhaul expenditures are capitalized.

Taxation

Income tax expense represents the sum of tax currently payable and deferred tax.

Current Income Tax

Current income tax assets and liabilities for the current and prior periods are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted by the date of the statement of financial position.

Deferred Income Tax

Deferred income tax is provided using the liability method on temporary differences at the date of the statement of financial position between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred income tax liabilities are recognized for all taxable temporary differences, except:

- where the deferred income tax liability arises from the initial recognition of goodwill or of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and
- in respect of taxable temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, where the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred income tax assets are recognized for all deductible temporary differences, carry forward of unused tax credits and unused tax losses, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences and the carry forward of unused tax credits and unused tax losses can be utilized except:

- where the deferred income tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and
- in respect of deductible temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, deferred income tax assets are recognized only to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilized.

The carrying amount of deferred income tax assets is reviewed at each date of the statement of financial position and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilized. Unrecognized deferred income tax assets are reassessed at each date of the statement of financial position and are recognized to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred income tax assets and liabilities are measured at the tax rates that are expected to apply to the year when the asset is realized or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the date of the statement of financial position.

Deferred income tax relating to items recognized directly in equity is recognized in equity and not in the statement of comprehensive income.

Deferred income tax assets and deferred income tax liabilities are offset if, and only if, a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred tax assets and liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend to either settle current tax liabilities and assets on a net basis, or to realize the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax assets or liabilities are expected to be settled or recovered.

Cash and Cash Equivalents

Cash and cash equivalents in the statement of financial position comprise cash at banks and on hand, and short term deposits with a remaining maturity of 90 days or less on the date of acquisition and which are readily convertible into a known amount of cash.

Financial Assets

All financial assets are initially recorded at fair value and designated upon inception into one of the following four categories: held-to-maturity, available-for-sale, loans-and-receivables or at fair value through profit or loss ("FVTPL").

Financial assets classified as FVTPL are measured at fair value with unrealized gains and losses recognized through earnings. The Company's cash and cash equivalents are classified as FVTPL.

Financial assets classified as loans-and-receivables and held-to-maturity are measured at amortized cost. The Company's trade and other receivables are classified as loans-and-receivables, with the exception of marketable securities which are classified as FVTPL.

Financial assets classified as held-to-maturity are measured at amortized cost. The Company's restricted investments and investments are classified as held-to-maturity.

Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the marketplace (regular way trades) are recognized on the settlement date.

Transactions costs associated with FVTPL financial assets are expensed as incurred, while transaction costs associated with all other financial assets are included in the initial carrying amount of the asset.

Financial Liabilities

All financial liabilities are initially recorded at fair value and designated upon inception as FVTPL or other-financial-liabilities.

Financial liabilities classified as other-financial-liabilities are initially recognized at fair value less directly attributable transaction costs. After initial recognition, other-financial-liabilities are subsequently measured at amortized cost using the effective interest method. The effective interest method is a method of calculating the amortized cost of a financial liability and of allocating interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments through the expected life of the financial liability, or, where appropriate, a shorter period. The Company's trade and other payables are classified as other-financial-liabilities.

Financial liabilities classified as FVTPL include financial liabilities held for trading and financial liabilities designated upon initial recognition as FVTPL. Derivatives, including separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments. Fair value changes on financial liabilities classified as FVTPL are recognized through the statement of comprehensive income. At December 31, 2011 the Company has not classified any financial liabilities as FVTPL.

Impairment of Financial Assets

The Company assesses at each date of the statement of financial position whether a financial asset is impaired.

Assets Carried at Amortized Cost

If there is objective evidence that an impairment loss on assets carried at amortized cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows discounted at the financial asset's original effective interest rate. The carrying amount of the asset is then reduced by the amount of the impairment. The amount of the loss is recognized in profit or loss.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognized, the previously recognized impairment loss is reversed to the extent that the carrying value of the asset does not exceed what the amortized cost would have been had the impairment not been recognized. Any subsequent reversal of an impairment loss is recognized in profit or loss.

In relation to trade receivables, a provision for impairment is made and an impairment loss is recognized in profit and loss when there is objective evidence (such as the probability of insolvency or significant financial difficulties of the debtor) that the Company will not be able to collect all of the amounts due under the original terms of the invoice. The carrying amount of the receivable is reduced through use of an allowance account. Impaired debts are written off against the allowance account when they are assessed as uncollectible.

Available-for-Sale

If an available-for-sale asset is impaired, an amount comprising the difference between its cost and its current fair value, less any impairment loss previously recognized in profit or loss, is transferred from equity to profit or loss. Reversals in respect of equity instruments classified as available-for-sale are not recognized in profit or loss.

Impairment of Long-term Assets

The carrying amounts of the Company's long-term assets, other than deferred tax assets, are reviewed at each reporting date to determine whether there is any indication of impairment. If an indication of impairment exists, then the asset's recoverable amount is estimated.

E&E assets are also assessed for impairment when they are reclassified to PP&E, and if facts and circumstances suggest that the carrying amount exceeds the recoverable amount. For the purpose of impairment testing, assets are grouped into the smallest group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows of other assets or groups of assets. The recoverable amount of an asset or a cash generating unit (“CGU”) is the greater of its value in use and its fair value less costs to sell (“FVLCTS”).

Value in use is determined by estimating the present value of the pre-tax future net cash flows expected to be derived from the continued use of the asset or CGU. FVLCTS is based on available market information, where applicable. In the absence of such information, FVLCTS is determined using discounted future after tax net cash flows of proved plus probable reserves using forecast prices and costs.

E&E assets are allocated to related CGUs where they will be assessed for impairment upon their eventual reclassification to PP&E. E&E assets not reclassified to PP&E are assessed for impairment on an operating segment level.

An impairment loss is recognized if the carrying amount of an asset or its CGU exceeds its estimated recoverable amount. Impairment losses are recognized in net income (loss) in the statement of comprehensive loss. Impairment losses recognized in respect of CGUs are allocated first to reduce the carrying amount of any goodwill allocated to the units and then to reduce the carrying amounts of the other assets in the unit (group of units) on a pro-rata basis.

Impairment losses recognized in prior years are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset’s carrying amount does not exceed the carrying amount that would have been determined, net of depletion and depreciation or amortization, if no impairment loss had been recognized.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) that has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risk specific to the obligation. The increase in the provision due to passage of time is recognized as interest expense.

Related Party Transactions

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Parties are also considered to be related if they are subject to common control or common significant influence, related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties. Related party transactions that are in the normal course of business and have commercial substance are measured at the exchange amount.

Foreign Currency Transactions

Functional and Presentation Currency

Items included in the financial statements of each of the Company’s consolidated entities are measured using the currency of the primary economic environment in which each entity operates (“the functional currency”). The functional currency of the Company and each of its subsidiaries is the United States dollar. The consolidated financial statements are presented in United States dollars, which is the Company’s presentation currency.

Transactions and Balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions or valuation where items are re-measured. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognized in the statement of comprehensive loss.

Revenue Recognition

CGX recognizes interest revenue as earned on accrual basis. Gain on marketable securities includes realized and unrealized gains and losses on marketable securities (included with receivables and other and classified as “held for trading” financial assets) which are recorded at fair market value based on level 1 quoted market prices as at the statement of financial position date.

Significant Accounting Judgments and Estimates

The preparation of these financial statements requires management to make judgments and estimates and form assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. On an ongoing basis, management evaluates its judgments and estimates in relation to assets, liabilities, revenue and expenses. Management uses historical experience and various other factors it believes to be reasonable under the given circumstances as the basis for its judgments and estimates. Actual outcomes may differ from these estimates under different assumptions and conditions. The most significant estimates relate to asset retirement obligations; property, plant and equipment, recoverability of trade and other receivables, valuation of deferred income tax amounts, impairment testing and the calculation of share-based payments. The most significant judgments relate to recognition of deferred tax assets and liabilities, determination of the commencement of commercial production and the determination of the economic viability of a project.

STATUS OF CGX TRANSITION TO IFRS

Transition to IFRS from GAAP

In February 2008, the Canadian Accounting Standards Board confirmed that Canadian publicly accountable enterprises will be required to adopt IFRS for financial periods beginning on and after January 1, 2011.

The Company has adopted IFRS with an adoption date of January 1, 2011 and a transition date of January 1, 2010.

IFRS Conversion

The Company's IFRS conversion plan was comprehensive and addressed matters including changes in accounting policies, restatement of comparative periods, organizational and internal controls and any required changes to business processes. To facilitate this process and ensure the full impact of the conversion was understood and managed reasonably, the Company hired an IFRS conversion project manager. The accounting staff attended several training courses on the adoption and implementation of IFRS. Through in-depth training and the preparation of reconciliations of historical Canadian GAAP financial statements to IFRS, the Company believes that its accounting personnel have obtained a thorough understanding of IFRS.

In conjunction with the adoption of IFRS the Company has implemented a new accounting system, which will satisfy all the information needs of the Company under IFRS. The Company has also reviewed its current internal and disclosure control processes and believes they will not need significant modification as a result of our conversion to IFRS.

Impact of IFRS

IFRS employs a conceptual framework that is similar to Canadian GAAP; however significant differences exist in certain matters of recognition, measurement and disclosure. While the adoption of IFRS will not change the actual cash flows of the Company, the adoption will result in changes to the reported financial position and results of operations of the Company. In order to allow the users of the financial statements

to better understand these changes, we have provided the reconciliations between Canadian GAAP and IFRS for the total assets, total liabilities, shareholders equity and net earnings in Note 3 to the consolidated financial statements. The adoption of IFRS has had no significant impact on the net cash flows of the Company.

In preparing the reconciliations, the Company applied the principles and elections of IFRS 1, with a transition date of January 1, 2010. As the Company has adopted IFRS effective January 1, 2010, it will apply the provisions of IFRS 1 as described under the section entitled "Initial Adoption – IFRS 1", with a January 1, 2010 transition date. The Company will also apply IFRS standards in effect at December 31, 2011 as required by IFRS 1.

Initial Adoption of International Accounting Standards

IFRS 1 "First Time Adoption of International Accounting Standards" sets forth guidance for the initial adoption of IFRS. Under IFRS 1 the standards are applied retrospectively at the transitional date of the statement of financial position with all adjustments to assets and liabilities as stated under GAAP taken to retained earnings unless certain exemptions are applied. The Company has chosen to take the following exemptions under IFRS 1:

- to apply the requirements of IFRS 3, *Business Combinations*, prospectively from the Transition Date; and
- to apply the requirements of IFRS 2, *Share-based payments*, only to equity instruments granted after November 7, 2002 which had not vested as of the Transition Date.

Comparative Information

The Company has restated all prior periods figures from January 1, 2010 to December 31, 2010, in accordance with IFRS.

Change to Initial Accounting Policy for Exploration and Evaluation ("E&E") Expenditures Adopted under IFRS

In the three month period ending December 31, 2011, the Company changed its IFRS policy under IFRS 6 - Exploration for and Evaluation of Mineral Resources. The Company had originally elected to expense all costs relating to the exploration and evaluation of its petroleum and natural gas properties as previously reported in the unaudited interim consolidated financial statements for the three-month periods ended March 31, 2011, June 30, 2011 and September 30, 2011. During the three months ended December 31, 2011, the Company elected to change its policy on its initial adoption of IFRS to capitalize all costs relating to the exploration and evaluation of its properties as it felt that this policy provided more useful information to the users. Therefore, the Company has restated its comparative and IFRS transition balances. The result of this change in policy is an increase to capitalized exploration and evaluation expenditures and a corresponding decrease to accumulated deficit of \$33,202,231 on the consolidated statement of financial position as at March 31, 2011 (June 30, 2011 - \$39,025,468, September 30, 2011 - \$39,881,052). In addition, the net loss for the three month period ended March 31, 2011 decreases by \$1,357,898, three month and six month ended June 30, 2011 decreases by \$5,823,237 and \$7,181,135, respectively, and three month and nine month ended September 30, 2011 decreases by \$855,584 and \$8,036,719, respectively. See Note 3 of the consolidated financial statements for impact to the January 1, 2010 and December 31, 2010 statement of financial position and the net loss for the year ended December 31, 2010. The impact of the change to the previously reported quarterly financial information is as follows:

	Q1		Q2		Q3	
	Accumulated Deficit	E&E Expenditures	Accumulated Deficit	E&E Expenditures	Accumulated Deficit	E&E Expenditures
Previously Reported	(88,696,187)	1,796,748	(95,607,359)	1,796,748	(100,023,193)	1,796,748
Revised	(55,493,956)	34,998,979	(56,581,891)	40,822,216	(60,142,141)	41,677,800

Evaluation of Disclosure Controls and Procedures and Internal Control over Financial Reporting

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported to senior management, including the Company's President and Chief Executive Officer and Chief Financial Officer, on a timely basis so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of the Company, with the participation of the President and Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Company's disclosure controls and procedures as required by Canadian securities laws. Based on that evaluation, the President and Chief Executive Officer and the Chief Financial Officer have concluded that, as of the end of the year covered by this MD&A, the disclosure controls and procedures were designed to provide reasonable assurance that information required to be disclosed in the Company's annual filings and interim filings (as such terms are defined under *National Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings*) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws and that material information is accumulated and communicated to management of the Company, including the President and Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Internal Control over Financial Reporting

Internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements in accordance with IFRS. The Company's President and Chief Executive Officer and Chief Financial Officer have ensured the design of internal control over financial reporting.

Management assessed the effectiveness of the design of the Company's internal controls over financial reporting as of December 31, 2011. Based on that assessment, the Company determined that, due to an overall increase in operating activity during the year ended December 31, 2011, the Company's process relating to accounts payable and cash advances in Guyana had reportable weaknesses related to the ineffective design of the related controls. In 2012 management implemented new control procedures to remediate the weaknesses.

There were no additional changes in the Company's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

OTHER INFORMATION

This MD&A of the financial position and results of operation as at December 31, 2011, should be read in conjunction with the audited comparative consolidated financial statements and related notes for the years ended December 31, 2011 and 2010. Additional information is accessible at the Company's website www.cgxenergy.com or through the Company's public filings at www.sedar.com.

MANAGEMENT'S RESPONSIBILITY

Management is responsible for all information contained in this MD&A. The audited interim consolidated financial statements have been prepared in accordance with International Financial Reporting Standards and include amounts based on management's informed judgments and estimates. The financial and operating information included in this MD&A is consistent with that contained in the audited consolidated financial statements in all material aspects.

Management maintains internal controls to provide reasonable assurance that financial information is reliable and accurate and assets are safeguarded.

The Audit Committee has reviewed the audited consolidated financial statements with management. The Board of Directors has approved these audited consolidated financial statements on the recommendation of the Audit Committee.

Audited Consolidated Financial Statements

For the years ended

December 31, 2011 and 2010

MANAGEMENT'S RESPONSIBILITY FOR AUDITED CONSOLIDATED FINANCIAL REPORTING

The accompanying consolidated financial statements of CGX Energy Inc. (the "Company") are the responsibility of the management and Board of Directors of the Company.

The consolidated financial statements have been prepared by management, on behalf of the Board of Directors, in accordance with International Financial Reporting Standards ("IFRS"). When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgements. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects.

The Company maintains systems of internal controls that are designed by management to provide reasonable assurance that its assets are safeguarded from loss or unauthorized use and to produce reliable accounting records for financial reporting purposes.

The Board of Directors is responsible for reviewing and approving the audited consolidated financial statements together with other financial information of the Company and for ensuring that management fulfills its financial reporting responsibilities. An Audit Committee assists the Board of Directors in fulfilling this responsibility. The Audit Committee meets with management to review the financial reporting process and the audited consolidated financial statements together with other financial information of the Company. The Audit Committee reports its findings to the Board of Directors for its consideration in approving the audited consolidated financial statements together with other financial information of the Company for issuance to the shareholders.

Management recognizes its responsibility for conducting the Company's affairs in compliance with established financial standards, and applicable laws and regulations, and for maintaining proper standards of conduct for its activities.

"Stephen Hermeston"
President and Chief Executive Officer

"Tralisa Maraj"
Chief Financial Officer

INDEPENDENT AUDITORS' REPORT

To the shareholders of CGX Energy Inc.

We have audited the accompanying consolidated financial statements of CGX Energy Inc., which comprise the consolidated statements of financial position as at December 31, 2011 and 2010 and January 1, 2010, and the consolidated statements of comprehensive loss, changes in equity and cash flows for the years ended December 31, 2011 and 2010, and a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

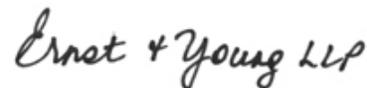

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of CGX Energy Inc. as at December 31, 2011 and 2010 and January 1, 2010, and its financial performance and its cash flows for the years ended December 31, 2011 and 2010 in accordance with International Financial Reporting Standards.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

General

CGX Energy Inc. (“CGX” or the “Company”) is incorporated under the laws of Ontario. The Company’s head office is located at 130 Adelaide Street West, Suite 1010, Toronto, Ontario, M5H 3P5. Its principal business activity is petroleum and natural gas exploration offshore Guyana, South America.

1. Nature of Operations

The Company is in the process of exploring and evaluating its petroleum and natural gas properties in the Guyana Suriname basin, a frontier basin in South America. The business of petroleum and natural gas exploration involves a high degree of risk and there can be no assurance that the Company’s exploration programs will result in profitable operations. The amounts shown as exploration and evaluation expenditures represent acquisition costs to date and are not necessarily representative of present or future cash flows. The recoverability of the Company’s exploration and evaluation expenditures is dependent upon the discovery of economically recoverable petroleum and natural gas reserves; securing and maintaining title and beneficial interest in the properties; the ability to obtain the necessary financing to complete exploration, development and construction of processing facilities; obtaining certain government approvals and attaining profitable production or alternatively, upon the Company’s ability to dispose of its interest on an advantageous basis; all of which are uncertain.

2. Basis of Preparation

2.1 Statement of compliance

These consolidated financial statements have been prepared in accordance with IFRS as issued by the International Accounting Standards Board. The Company adopted IFRS in accordance with IFRS 1 – First Time Adoption of IFRS as discussed in Note 3.

These are the Company’s first IFRS consolidated annual financial statements for the year ended December 31, 2011. Previously, the Company prepared its consolidated annual financial statements in accordance with Canadian Generally Accepted Accounting Principles (“GAAP”). In preparing these consolidated financial statements management has amended certain accounting methods previously applied under GAAP financial statements to comply with IFRS, however the adoption of IFRS did not have a financial impact on the comparative figures for 2010 and therefore no reconciliations have been prepared. During the fourth quarter of 2011, the Company changed its accounting policy for exploration and evaluation expenditures (Note 3).

These consolidated financial statements were approved and authorized by the Board of Directors of the Company on April 24, 2012.

2.2 Basis of measurement

The consolidated financial statements have been prepared on the historical cost basis except for certain non-current assets and financial instruments, which are measured at fair value, as explained in the accounting policies set out in Note 4.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

2. Basis of Preparation *(continued)*

2.3 Use of management estimates, judgments and measurement uncertainty

The preparation of these financial statements requires management to make judgements and estimates and form assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Such estimates primarily relate to unsettled transactions and events as at the date of the consolidated financial statements. On an ongoing basis, management evaluates its judgements and estimates in relation to assets, liabilities, revenue and expenses. Management uses historical experience and various other factors it believes to be reasonable under the given circumstances as the basis for its judgements and estimates. Actual outcomes may differ from these estimates under different assumptions and conditions. The most significant estimates relate to asset retirement obligations, exploration and evaluation expenditures, property, plant and equipment, recoverability of trade and other receivables, valuation of deferred income tax amounts, impairment testing and the calculation of share-based payments. Significant estimates and judgments made by management in the preparation of these consolidated financial statements are outlined below:

Exploration and evaluation (“E&E”)

The decision to transfer assets from E&E to property, plant and equipment (“PP&E”) is based on the estimated proved plus probable reserves used in the determination of an area’s technical feasibility and commercial viability.

Income taxes

Tax interpretations, regulations and legislation in the various jurisdictions in which the Company and its subsidiaries operate are subject to change and interpretation. As such, income taxes are subject to measurement uncertainty. The Company follows the liability method for calculating deferred taxes. Assessing the recoverability of deferred tax assets requires the Company to make significant estimates related to the expectations of future cash flows from operations and the application of existing tax laws. To the extent that future cash flows and taxable income differ significantly from estimates, the ability of the Company to realize the deferred tax assets and liabilities recorded at the statement of financial position date could be impacted. Additionally, changes in tax laws could limit the ability of the Company to obtain tax deductions in the future.

Cash generating units

Cash generating units (“CGU’s”) are identified to be the major producing fields, the lowest level at which there are identifiable cash inflows that are largely independent of cash inflows of other groups of assets. The determination of CGUs requires judgment in defining a group of assets that generate cash inflows that are largely independent of the cash inflows from other assets or groups of assets. CGUs are determined by similar geological structure, shared infrastructure, geographical proximity, commodity type, similar exposure to market risks and materiality.

The Company prepares and reviews separate detailed budgets and forecast calculations for each of the cash generating units. Impairment assessment is generally carried out separately for each CGU based on cash flow forecasts calculated based on proven reserves for each CGU (value in use). As at December 31, 2011, the Company has does not have any CGU’s, but has identified potential CGU’s based on its Petroleum Prospecting Licences (“PPL”).

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

2. Basis of Preparation *(continued)*

2.3 Use of management estimates, judgments and measurement uncertainty *(continued)*

Functional Currency

The determination of the Company's functional currency requires analyzing facts that are considered primary factors, and if the result is not conclusive, the secondary factors. The analysis requires the Company to apply significant judgment since primary and secondary factors may be mixed. In determining its functional currency the Company analyzed both the primary and secondary factors, including the currency of the Company's operating costs in Canada, United States and Guyana, and sources of equity financing.

3. First Time Adoption of IFRS

The Company adopted IFRS on January 1, 2011 with a transition date of January 1, 2010. Under IFRS 1 *'First time Adoption of International Financial Reporting Standards'*, IFRS is applied retrospectively at the transition date with all adjustments to assets and liabilities as stated under GAAP taken to retained earnings unless certain exemptions are applied.

The Company elected to take the following IFRS 1 optional exemptions:

- to apply the requirements of IFRS 3, *Business Combinations*, prospectively from the transition date; and
- to apply the requirements of IFRS 2, *Share-based payments*, only to equity instruments granted after November 7, 2002 which had not vested as of the transition date.

Change to Initial Accounting Policy for Exploration and Evaluation (“E&E”) Expenditures Adopted under IFRS

In the three month period ending December 31, 2011, the Company changed its IFRS policy under IFRS 6 - Exploration for and Evaluation of Mineral Resources. The Company had originally elected to expense all costs relating to the exploration and evaluation of its petroleum and natural gas properties as previously reported. The Company has now elected to change its policy on its initial adoption of IFRS to capitalize all costs relating to the exploration and evaluation of its properties as it felt that this policy provided more useful information to the users. Therefore, the Company has revised its 2010 comparative and IFRS transition balances. The result of this change in policy is an increase to capitalized exploration and evaluation expenditures and a corresponding decrease to accumulated deficit of \$25,127,635 on the consolidated statement of financial position as at January 1, 2010 and \$31,844,333 as at December 31, 2010. In addition, the net loss and net loss per share for the year ended December 31, 2010 decreased by \$6,716,698 and \$0.05, respectively. The results of the changes are presented below:

	January 1, 2010		December 31, 2010		Net Loss
	Accumulated Deficit	E&E Expenditures	Accumulated Deficit	E&E Expenditures	
Previously Reported	(75,508,281)	1,796,748	(86,965,468)	1,796,748	(11,457,187)
Revised	(50,380,646)	26,924,383	(55,121,135)	33,641,081	(4,740,489)

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

3. First Time Adoption of IFRS (continued)

IFRS employs a conceptual framework that is similar to GAAP. The adoption has not resulted in any significant changes to the reported financial position, results of operations, and cash flows of the Company. Presented below is a reconciliation prepared by the Company to reconcile to IFRS the assets, liabilities and equity of the Company from those reported under GAAP on the date of transition:

Reconciliation of assets, liabilities and equity

	\$ 43,727,070	-	\$ 43,727,070

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$’s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies

4.1 Basis of consolidation

The consolidated financial statements include the financial statements of the Company together with its wholly owned subsidiaries CGX Resources Inc., a Bahamian registered company (“CGX Resources”), 1524555 Alberta Limited, an Alberta registered company, GCIE Holdings Limited, a Barbados registered company, CGX Energy Management Corp., a US registered company as well as its 62% interest in ON Energy Inc., a Guyana registered company (“ON Energy”).

The results of subsidiaries acquired or disposed of during the year are included in the consolidated statement of comprehensive loss from the effective date of acquisition or up to the effective date of disposal, as appropriate.

All inter-Company and intra-Company transactions, balances, income and expenses are eliminated in full on consolidation.

Non-controlling interests in the net assets of consolidated subsidiaries are identified separately from the Company’s equity therein. Non-controlling interests consist of the amount of those interests at the date of the original business combination and the non-controlling interests’ share of changes in equity since the date of the combination. Losses applicable to the non-controlling interests in excess of the Company’s interest in the subsidiary’s equity are allocated against the interests of the Company except to the extent that the non-controlling interests have a binding obligation and are able to make an additional investment to cover the losses. As at December 31, 2011 and 2010, the non-controlling interests had a value of \$Nil.

4.2 Exploration and evaluation expenditures

All license acquisition, exploration and appraisal costs of technical services and studies, seismic acquisition, exploratory drilling and testing are initially capitalized by well, field, unit of account or specific exploration unit as appropriate. Expenditures incurred during the various exploration and appraisal phases are carried forward, until the existence of commercial reserves and when the technical feasibility and commercial viability are demonstrable and approved by regulator. If commercial reserves have been discovered and technical feasibility and commercial viability are demonstrable, the carrying value of the exploration and evaluation assets, after any impairment loss, is reclassified as oil and gas properties. If technical feasibility and commercial viability cannot be demonstrated upon completion of the exploration phase, the carrying value of the exploration and evaluation costs incurred are expensed in the period this determination is made.

Exploration and evaluation assets are tested for impairment when indicators of impairment are present and when exploration and evaluation assets are transferred to oil and gas properties. The Company has determined the level for assessing for impairment at the cash-generating unit level.

4.3 Decommissioning, restoration and similar liabilities (“Asset retirement obligation” or “ARO”)

The Company recognizes liabilities for statutory, contractual, constructive or legal obligations, including those associated with the reclamation of petroleum and natural gas and PP&E, when those obligations result from the acquisition, construction, development or normal operation of the assets. Initially, a liability for an asset retirement obligation is recognized at its fair value in the period in which it is incurred. Upon initial recognition of the liability, the corresponding asset retirement obligation is added to the carrying amount of the related asset and the cost is amortized as an expense over the economic life of the asset using either the unit-of-production method or the straight-line method, as appropriate. Following the initial recognition of the asset retirement obligation, the carrying amount of the liability is increased for the

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.3 DeCommissioning, restoration and similar liabilities *(continued)*

passage of time and adjusted for changes to the current market-based discount rate, amount or timing of the underlying cash flows needed to settle the obligation.

4.4 Loss per share

The basic loss per share is computed by dividing the net loss by the weighted average number of common shares outstanding during the period. The diluted loss per share reflects the potential dilution of common share equivalents, such as outstanding stock options, in the weighted average number of common shares outstanding during the year, if dilutive. The “treasury stock method” is used for the assumed proceeds upon the exercise of the options and warrants that are used to purchase common shares at the average market price during the year. During the years ended December 31, 2011 and 2010 all the outstanding stock options were antidilutive.

4.5 Share based payments

Employees (including directors, officers and senior executives) of the Company receive a portion of their remuneration in the form of share-based payment transactions, whereby employees render services as consideration for equity instruments (“equity-settled transactions”).

In situations where equity instruments are issued and some or all of the goods or services received by the entity as consideration cannot be specifically identified, they are measured at fair value of the share-based payment.

The costs of equity-settled transactions with employees are measured by reference to the fair value at the date on which they are granted.

The costs of equity-settled transactions are recognized, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled, ending on the date on which the relevant employees become fully entitled to the award (“the vesting date”). The cumulative expense is recognized for equity-settled transactions at each reporting date until the vesting date reflects the Company’s best estimate of the number of equity instruments that will ultimately vest. The profit or loss charge or credit for a period represents the movement in cumulative expense recognized as at the beginning and end of that period and the corresponding amount is represented in share option reserve.

No expense is recognized for awards that do not ultimately vest, except for awards where vesting is conditional upon a market condition, which are treated as vesting irrespective of whether or not the market condition is satisfied provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, the minimum expense recognized is the expense as if the terms had not been modified. An additional expense is recognized for any modification which increases the total fair value of the share-based payment arrangement, or is otherwise beneficial to the employee as measured at the date of modification.

The dilutive effect of outstanding options is reflected as additional dilution in the computation of earnings per share.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.6 Property, plant and equipment

PP&E are stated at cost less accumulated amortization and accumulated impairment losses. The cost of an item of PP&E consists of the purchase price, any costs directly attributable to bringing the asset to the location and condition necessary for its intended use and an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located.

Amortization is provided at rates calculated to write off the cost of PP&E, less their estimated residual value, using the declining balance method at the following rates:

Office, furniture and fixtures	20%
Computer, software and equipment	30%

An item of PP&E is derecognized upon disposal, when held for sale or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on disposal of the asset, determined as the difference between the net disposal proceeds and the carrying amount of the asset, is recognized in the consolidated statement of comprehensive income.

The Company conducts an annual assessment of the residual balances, useful lives and amortization methods being used for PP&E and any changes arising from the assessment are applied by the Company prospectively.

Where an item of plant and equipment comprises major components with different useful lives, the components are accounted for as separate items of plant and equipment. Expenditures incurred to replace a component of an item of property, plant and equipment that is accounted for separately, including major inspection and overhaul expenditures are capitalized.

4.7 Taxation

Income tax expense represents the sum of tax currently payable and deferred tax.

Current income tax

Current income tax assets and liabilities for the current and prior periods are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted by the date of the statement of financial position.

Deferred income tax

Deferred income tax is provided using the liability method on temporary differences at the date of the statement of financial position between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred income tax liabilities are recognized for all taxable temporary differences, except:

- where the deferred income tax liability arises from the initial recognition of goodwill or of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.7 Taxation *(continued)*

- in respect of taxable temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, where the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred income tax assets are recognized for all deductible temporary differences, carry forward of unused tax credits and unused tax losses, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences and the carry forward of unused tax credits and unused tax losses can be utilized except:

- where the deferred income tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and
- in respect of deductible temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, deferred income tax assets are recognized only to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilized.

The carrying amount of deferred income tax assets is reviewed at each date of the statement of financial position and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilized. Unrecognized deferred income tax assets are reassessed at each date of the statement of financial position and are recognized to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred income tax assets and liabilities are measured at the tax rates that are expected to apply to the year when the asset is realized or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the date of the statement of financial position.

Deferred income tax relating to items recognized directly in equity is recognized in equity and not in the statement of comprehensive income.

Deferred income tax assets and deferred income tax liabilities are offset if, and only if, a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred tax assets and liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend to either settle current tax liabilities and assets on a net basis, or to realize the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax assets or liabilities are expected to be settled or recovered.

4.8 Cash and cash equivalents

Cash and cash equivalents in the statement of financial position comprise cash at banks and on hand, and short term deposits with a remaining maturity of 90 days or less on the date of acquisition and which are readily convertible into a known amount of cash.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.9 Financial assets

All financial assets are initially recorded at fair value and designated upon inception into one of the following four categories: held-to-maturity, available-for-sale, loans-and-receivables or at fair value through profit or loss (“FVTPL”).

Financial assets classified as FVTPL are measured at fair value with unrealized gains and losses recognized through earnings. The Company’s cash and cash equivalents are classified as FVTPL.

Financial assets classified as loans-and-receivables and held-to-maturity are measured at amortized cost. The Company’s trade and other receivables are classified as loans-and-receivables, with the exception of marketable securities which are classified as FVTPL.

Financial assets classified as held-to-maturity are measured at amortized cost. The Company’s restricted investments and investments are classified as held-to-maturity.

Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the marketplace (regular way trades) are recognized on the settlement date.

Transactions costs associated with FVTPL financial assets are expensed as incurred, while transaction costs associated with all other financial assets are included in the initial carrying amount of the asset.

4.10 Financial liabilities

All financial liabilities are initially recorded at fair value and designated upon inception as FVTPL or other-financial-liabilities.

Financial liabilities classified as other-financial-liabilities are initially recognized at fair value less directly attributable transaction costs. After initial recognition, other-financial-liabilities are subsequently measured at amortized cost using the effective interest method. The effective interest method is a method of calculating the amortized cost of a financial liability and of allocating interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments through the expected life of the financial liability, or, where appropriate, a shorter period. The Company’s trade and other payables are classified as other-financial-liabilities.

Financial liabilities classified as FVTPL include financial liabilities held for trading and financial liabilities designated upon initial recognition as FVTPL. Derivatives, including separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments. Fair value changes on financial liabilities classified as FVTPL are recognized through the statement of comprehensive income. At December 31, 2011 the Company has not classified any financial liabilities as FVTPL.

4.11 Impairment of financial assets

The Company assesses at each date of the statement of financial position whether a financial asset is impaired.

Assets carried at amortized cost

If there is objective evidence that an impairment loss on assets carried at amortized cost has been

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

Summary of Significant Accounting Policies *(continued)*

4.11 Impairment of financial assets *(continued)*

incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows discounted at the financial asset's original effective interest rate. The carrying amount of the asset is then reduced by the amount of the impairment. The amount of the loss is recognized in profit or loss.

The Company assesses at each date of the statement of financial position whether a financial asset is impaired.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognized, the previously recognized impairment loss is reversed to the extent that the carrying value of the asset does not exceed what the amortized cost would have been had the impairment not been recognized. Any subsequent reversal of an impairment loss is recognized in profit or loss.

In relation to trade receivables, a provision for impairment is made and an impairment loss is recognized in profit and loss when there is objective evidence (such as the probability of insolvency or significant financial difficulties of the debtor) that the Company will not be able to collect all of the amounts due under the original terms of the invoice. The carrying amount of the receivable is reduced through use of an allowance account. Impaired debts are written off against the allowance account when they are assessed as uncollectible.

Available-for-sale

The carrying amounts of the Company's long-term assets, other than deferred tax assets, are reviewed at each reporting date to determine whether there is any indication of impairment. If an indication of impairment exists, then the asset's recoverable amount is estimated.

E&E assets are also assessed for impairment when they are reclassified to PP&E, and if facts and circumstances suggest that the carrying amount exceeds the recoverable amount. For the purpose of impairment testing, assets are grouped into the smallest group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows of other assets or groups of assets. The recoverable amount of an asset or a CGU is the greater of its value in use and its fair value less costs to sell ("FVLCTS").

Value in use is determined by estimating the present value of the pre-tax future net cash flows expected to be derived from the continued use of the asset or CGU. FVLCTS is based on available market information, where applicable. In the absence of such information, FVLCTS is determined using discounted future after tax net cash flows of proved plus probable reserves using forecast prices and costs.

E&E assets are allocated to related CGUs where they will be assessed for impairment upon their eventual reclassification to PP&E. E&E assets not reclassified to PP&E are assessed for impairment on an operating segment level.

An impairment loss is recognized if the carrying amount of an asset or its CGU exceeds its estimated recoverable amount. Impairment losses are recognized in net income (loss) in the statement of comprehensive loss. Impairment losses recognized in respect of CGUs are allocated first to reduce the carrying amount of any goodwill allocated to the units and then to reduce the carrying amounts of the other assets in the unit (group of units) on a pro-rata basis.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.11 Impairment of financial assets *(continued)*

Impairment losses recognized in prior years are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depletion and depreciation or amortization, if no impairment loss had been recognized.

4.12 Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) that has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risk specific to the obligation. The increase in the provision due to passage of time is recognized as interest expense.

4.13 Related party transactions

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Parties are also considered to be related if they are subject to common control or common significant influence, related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties. Related party transactions that are in the normal course of business and have commercial substance are measured at the exchange amount.

4.14 Foreign currency transactions

Functional and presentation currency

Items included in the financial statements of each of the Company's consolidated entities are measured using the currency of the primary economic environment in which each entity operates ("the functional currency"). The functional currency of the Company and each of its subsidiaries is the US\$. The consolidated financial statements are presented in US\$'s, which is the Company's presentation currency.

Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions or valuation where items are re-measured. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognized in the statement of comprehensive loss.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.15 Revenue recognition

CGX recognizes interest revenue as earned on accrual basis. Gain on marketable securities includes realized and unrealized gains and losses on marketable securities which are recorded at fair market value based on level 1 quoted market prices as at the statement of financial position date.

4.16 Comparative figures

Certain comparative figures have been reclassified to conform to the current year basis of presentation.

4.17 New and revised standards and interpretations not yet adopted

The IASB issued a number of new and revised International Accounting Standards, IFRS, amendments and related interpretations which are effective for the Company's financial year beginning on or after January 1, 2011. For the purpose of preparing and presenting the financial information for the relevant periods, the Company has consistently adopted all these new standards for the relevant reporting periods.

At the date of authorization of these Financial Statements, the IASB and IFRIC has issued the following new and revised Standards and Interpretations which are not yet effective for the relevant reporting periods and which the Company has not early adopted these standards, amendments and interpretations. However the Company is currently assessing what impact the application of these standards or amendments will have on the consolidated financial statements of the Company.

- IFRS 7 '*Financial Instruments, Disclosures*' - effective for annual periods beginning on or after January 1, 2013, IFRS 7 has been amended to provide more extensive quantitative disclosures for financial instruments that are offset in the statement of financial position or that are subject to enforceable master netting similar arrangements.
- IFRS 9 '*Financial Instruments: Classification and Measurement*' – effective for annual periods beginning on or after January 1, 2015, with early adoption permitted, introduces new requirements for the classification and measurement of financial instruments.
- IFRS 10 '*Consolidated Financial Statements*' – effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, establishes principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities.
- IFRS 11 '*Joint Arrangements*' - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, provides for a more realistic reflection of joint arrangements by focusing on the rights and obligations of the arrangement, rather than its legal form.
- IFRS 12 '*Disclosure of Interests in Other Entities*' - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, requires the disclosure of information that enables users of financial statements to evaluate the nature of, and risks associated with its interests in other entities and the effects of those interests on its financial position, financial performance and cash flows.
- IFRS 13 '*Fair Value Measurement*' - effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, provides the guidance on the measurement of fair value and related disclosures through a fair value hierarchy.
- IAS 1 '*Presentation of Financial Statements*' - the IASB amended IAS 1 with a new requirement for entities to group items presented in other comprehensive income on the basis of whether they are potentially reclassifiable to profit or loss.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

4. Summary of Significant Accounting Policies *(continued)*

4.17 New and revised standards and interpretations not yet adopted *(continued)*

- IAS 12 '*Income Taxes*' – In December 2010, effective for annual periods beginning on or after January 1, 2012, IAS 12 Income Taxes was amended to introduce an exception to the existing principle for the measurement of deferred tax assets or liabilities arising on investment property measured at fair value. As a result of the amendments, SIC 21, *Income Taxes – recovery of revalued non-depreciable assets*, will no longer apply to investment properties carried at fair value. The amendments also incorporate into IAS 12 the remaining guidance previously contained in SIC 21, which is withdrawn.
- IAS 19 '*Employee Benefits*' - effective for annual periods beginning on or after January 1, 2013, a number of amendments have been made to IAS 19, which included eliminating the use of the "corridor" approach and requiring remeasurements to be presented in OCI. The standard also includes amendments related to termination benefits as well as enhanced disclosures.
- IAS 27 '*Separate Financial Statements*' - effective for annual periods beginning on or after January 1, 2013, as a result of the issue of the new consolidation suite of standards, IAS 27 Separate Financial Statements has been reissued, as the consolidation guidance will now be included in IFRS 10. IAS 27 will now only prescribe the accounting and disclosure requirements for investments in subsidiaries, joint ventures and associates when an entity prepares separate financial statements.
- IAS 28 '*Investments in Associates and Joint Ventures*' - effective for annual periods beginning on or after January 1, 2013, as a consequence of the issue of IFRS 10, IFRS 11 and IFRS 12, IAS 28 has been amended and will provide the accounting guidance for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures. The amended IAS 28 will be applied by all entities that are investors with joint control of, or significant influence over, an investee
- IAS 32 '*Financial instruments, Presentation*' – In December 2011, effective for annual periods beginning on or after January 1, 2013, IAS 32 was amended to clarify the requirements for offsetting financial assets and liabilities. The amendments clarify that the right of offset must be available on the current date and cannot be contingent on a future date.

5. Capital management

The Company manages its capital structure and makes adjustments to it, based on the funds available to the Company, in order to support the acquisition, exploration and development of petroleum and natural gas properties. The Board of Directors does not establish quantitative return on capital criteria for management, but rather relies on the expertise of management to sustain future development of the business.

The properties in which the Company currently has an interest are in the exploration stage; as such the Company is dependent on external financing to fund its activities. In order to carry out the planned exploration and pay for administrative costs, the Company will spend its existing working capital and raise additional amounts as needed. The Company will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so. Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Company, is reasonable.

The Company considers its capital to be equity, which is comprised of share capital, reserve accounts, and deficit, which as at December 31, 2011 totaled \$159,616,249 (2010 - \$79,321,653).

The Company invests all capital that is surplus to its immediate operational needs in short-term, liquid and highly rated financial instruments, such as cash, short-term guarantee deposits, all held with major

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

Canadian financial institutions and Canadian or United States government treasury bills ("T-Bills").

Management plans to secure the necessary financing through a combination of the exercise of existing stock options for the purchase of common shares and the issue of new equity and debt instruments. There is no assurance, however that these initiatives will be successful.

There were no changes in the Company's approach to capital management during the years ended December 31, 2011. The Company is not subject to externally imposed capital restrictions.

6. Financial instruments

Fair value

The Company has designated its cash and cash equivalents and marketable securities as fair value through profit and loss which are measured at fair value. Fair value of cash and cash equivalents and marketable securities is determined based on transaction value and is categorized as Level one measurement. Restricted investments are classified as held to maturity and are measured at amortized cost. Trade and other receivables are classified for accounting purposes as loans and receivables, which are measured at amortized cost which approximates fair value. Trade and other payables are classified for accounting purposes as other financial liabilities, which are measured at amortized cost which also approximates fair value. Fair value of restricted investments, trade and other receivables and trade and other payables are determined based on Level 2 measurements:

- Level one includes quoted prices (unadjusted) in active markets for identical assets or liabilities.
- Level two includes inputs that are observable other than quoted prices included in level one.
- Level three includes inputs that are not based on observable market data.

As at December 31, 2011, the carrying and fair value amounts of the Company's financial instruments are approximately equivalent due to the relatively short periods to maturity of these investments.

Fair value estimates are made at a specific point in time, based on relevant market information and information about financial instruments. These estimates are subject to and involve uncertainties and matters of significant judgment, therefore cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

A summary of the Company's risk exposures as it relates to financial instruments are reflected below:

i) Credit risk

Credit risk is the risk of loss associated with a counter-party's inability to fulfill its payment obligations. The credit risk is attributable to various financial instruments, as noted below. The credit risk is limited to the carrying value amount carried on the statement of financial position.

- a) **Cash and cash equivalents** – Cash and cash equivalents and restricted cash and cash equivalents are held with major Canadian financial institutions in Canada and therefore the risk of loss is minimal.
- b) **Trade and other receivables** – The Company is not exposed to major credit risk attributable to customers. Significant portions of this amount is due from the Canadian government.
- c) **Investments** – The Company has exposure for this balance at December 31, 2011 of \$Nil (2010 - \$17,707,547). The Company is not exposed to major credit risk attributable to these investments as they are US government T-Bills and therefore the risk of loss is minimal.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

6. Financial instruments *(continued)*

Fair value *(continued)*

The Company's maximum exposure to credit risk as at December 31, 2011 is the carrying value of cash and cash equivalents, trade and other receivables.

ii) Liquidity risk

The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities as they become due. As at December 31, 2011, the Company had working capital of \$86,364,429 (2010 – \$44,447,430). As such, management believes that the Company has sufficient working capital to discharge its current and anticipated obligations for a minimum of one year. However, in order to meet its longer-term working capital and property exploration expenditures, the Company intends on securing further financing to ensure that those obligations are properly discharged. There can be no assurance that the Company will be successful in its efforts to arrange additional financing on terms satisfactory to the Company. If additional financing is raised by the issuance of shares from the treasury of the Company, control of the Company may change and shareholders may suffer additional dilution. If adequate financing is not available, the Company may be required to delay, reduce the scope of, or eliminate one or more exploration activities or relinquish rights to certain of its interests.

iii) Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, commodity prices and/or stock market movements (price risk).

a) Interest rate risk

The Company is not exposed to significant interest rate price risk due to the short-term nature of its monetary assets and liabilities. Cash not required in the short term, is invested in short-term guaranteed investment certificates, as appropriate.

b) Currency risk

The Company's exploration and evaluation activities are substantially denominated in US dollars. The Company's funds are predominantly kept in Canadian and US dollars, with a major Canadian financial institution. As at December 31, 2011, the Company had approximately \$38,700,000 in Canadian dollar denominated cash deposits.

7. Sensitivity analysis

Based on management's knowledge and experience of the financial markets, the Company believes the following movements are "reasonably possible" over a one year period:

- i)** The Company's funds are kept in Canadian and US dollars a major Canadian financial institution.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

7. Sensitivity analysis *(continued)*

As at December 31, 2011, the Company's exposure to foreign currency balances is as follows:

Account	Foreign Currency	Exposure	
		2011	2010
December 31,			
Cash and cash equivalents	CDN \$	\$ 38,700,000	\$ 23,400,000
Trade and other receivables	CDN \$	800,000	400,000
Trade and other payables	CDN \$	(1,400,000)	(300,000)
		\$ 38,100,000	\$ 23,500,000

The Company believes that a change of 10% in foreign exchange rates would increase/decrease net loss for the period by \$3,810,000 (2010 - \$2,350,000).

8. Cash and cash equivalents

The balance of cash and cash equivalents at December 31, 2011, consists of \$60,825,981 (2010 - \$28,098,860, January 1, 2010 - 16,254,883) on deposit with major Canadian financial institutions in Canada and \$22,545,247 (2010 - \$210,546, January 1, 2010 - \$195,595) in short-term guaranteed investment certificates and fixed instruments with maturities of less than 90 days.

9. Restricted investments

The balance of restricted investments at December 31, 2011, consists of \$13,050,000 (2010 - \$Nil, January 1, 2010 - \$Nil) in short-term guaranteed investment certificates maturing on June 7, 2012. This short-term guaranteed investment certificates is restricted as collateral against the Company's irrevocable letter of credit with its offshore driller. See Note 19 for further commitment details.

10. Investments

On December 31, 2011, the Company's US government T-Bills, which were classified as held-to-maturity for accounting purposes matured. These US government T-Bills accrued interest at a rate of 1.125%. The break-down of this investment is as follows:

	December 31, 2011	December 31, 2010	January 1, 2010
Face value of T-Bills	\$ -	\$ 17,624,000	\$ -
Premium paid on T-Bills	-	83,547	-
	\$ -	\$ 17,707,547	\$ -

CGX Energy Inc.

For the years ended December 31, 2011 and 2010

11. Trade receivables and other assets

The Company's trade receivables and other assets arise from four main sources: trade receivables due from customers for premises rental and operating cost recoveries, harmonized sales tax ("HST") receivable due from government taxation authorities, marketable securities and prepaid expenses. These are broken down as follows:

	December 31, 2011	December 31, 2010	January 1, 2010
Trade receivables	\$ 235,471	\$ 94,606	\$ 115,882
HST receivable	280,012	202,429	54,738
Marketable securities	110,544	29,902	133,452
Prepaid expenses	236,594	57,101	24,461
Total trade receivables and other assets	\$ 862,621	\$ 384,038	\$ 328,533

Below is an aged analysis of the Company's trade receivables:

	December 31, 2011	December 31, 2010	January 1, 2010
1 – 30 days	\$ 149,171	\$ 54,925	\$ 30,938
31 – 60 days	1,941	19,338	15,831
61 – 90 days	212	9,353	4,173
90+ days	84,147	10,990	64,940
Total trade receivables	\$ 235,471	\$ 94,606	\$ 115,882

At December 31, 2011, the Company anticipates full recovery of these amounts and therefore no allowance has been recorded against these receivables. The credit risk on the receivables has been further discussed in Note 6.

The Company holds no collateral for any receivable amounts outstanding as at December 31, 2011.

13. Exploration and evaluation expenditures *(continued)*

Corentyne Petroleum Agreement (PA), Guyana

CGX Resources was granted the Corentyne PA on June 24, 1998. Because a border dispute between Guyana and Suriname prevented unhindered access to a portion of the contract area for seven years the original 10-year term of the contract was extended to June 24, 2013 including the two renewal periods. On November 30, 2002, the first Renewal Period of the Petroleum Agreement was granted which included renegotiated work commitments. On June 24, 2010, the second renewal of the Petroleum Agreement was granted by the Government of Guyana for a term of three years, requiring the drilling of two exploration wells.

On November 3, 2011, the Company signed an extension on its proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's minimum expenditure obligation for the second renewal period (the "Corentyne Guarantee"). The Corentyne Guarantee is intended to be and shall be constructed as continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of \$3,400,000 and shall remain in force and effect until the end of the second renewal period which ends on June 24, 2013.

The Corentyne PA covers approximately 2.9 million acres comprised of two petroleum prospecting licenses ("PPL") - the Annex PPL which is owned 100% by CGX Resources and the Corentyne PPL which is split into two components - the exploration rights offshore owned 100% by CGX Resources and the exploration rights onshore owned 100% by ON Energy having been transferred to ON Energy by CGX Resources in September 2003. Annual Rental and Training Fees are \$100,000. If a discovery is made, CGX has the right to convert the Discovery Area plus reasonable surrounding acreage to a Production Licence, subtracting this area from the contract area. At the conclusion of the second renewal period, all acreage outside of a Production Licence will be relinquished. It is the Company's intention to seek a reissuance of the majority of the acreage. The term of a Production Licence is 20 years, renewable for a further 10 years.

After commercial production begins, the Licensee is allowed to recover all capital and operating costs from "cost oil" which for the first three years is up to 75% of production and thereafter up to 65% of production. The Licensee's share of the remaining production or "profit oil", for the first five years is 50% of the first 40,000 barrels of oil per day and 47% for additional productions; and thereafter 45% in full satisfaction of all income taxes and royalties.

Second Renewal Phase 2	December 2011	June 2013	Drill first and second exploration wells		

Georgetown PA, Guyana

The Company, through its wholly-owned subsidiary CGX Resources, purchased a 25% participating interest in the Georgetown PA from ENI Guyana, B.V. for \$175,000 and \$1,075,000 at the commencement of the first well in the PA that targets one of the Tertiary turbidite prospects previously identified by ENI in which CGX participates. The Government of Guyana approved the transfer on September 3, 2002. The original vendor retains a 2.7% right to ownership of Profit Oil in the Licence. The Georgetown PA currently covers approximately 1.7 million acres offshore.

Exploration on the Licence was suspended in 2000 as a significant portion of the Licence was in the area of the overlapping border dispute between Guyana and Suriname. The dispute was resolved in 2007. As a result, the second renewal period of the Petroleum Agreement was extended to November 2012.

CGX Energy Inc.
Notes to the Audited Consolidated Financial Statements – (US\$'s)
For the years ended December 31, 2011 and 2010

13. Exploration and evaluation expenditures *(continued)*

Georgetown PA, Guyana *(continued)*

On March 22, 2010, the Company signed a proper and punctual performance guarantee of the obligations of the Company to the Minister Responsible for Petroleum of the Co-operative Republic of Guyana to pay the Company's proportionate percentage interest share of the minimum expenditure obligation for the second renewal period (the "Georgetown Guarantee"). The Georgetown Guarantee is intended to be and shall be constructed as continuing, absolute, unconditional and irrevocable guarantee for up to an aggregate maximum of \$2,000,000 and shall remain in force and effect November 25, 2012.

To satisfy the Minimum Work Program during the second renewal period 1 of the contract, the Georgetown participants being Repsol Exploración S.A (15% and operator), YPF Guyana Limited (30%) and Tullow Guyana BV (30%) (collectively the "Georgetown Participants") committed to drill an exploration well during the period ending May 2011. However, due to a number of factors including weather delays, the drilling of this exploration well commenced in February 2012. The Georgetown Participants advised the Government of Guyana of these circumstances which were beyond their control and were provided with an extension on the commitment to November 25, 2012. At the conclusion of the second renewal period, all acreage outside of a Production Licence will be relinquished.

Pomeroon PA, Guyana

The Company, through its wholly-owned subsidiary CGX Resources, entered into an asset purchase agreement with Century Guyana, Ltd. (Century) to acquire Century's 100% interest in the Pomeroon PA. The Pomeroon PA is located offshore between CGX's 100% owned Annex portion of the Corentyne PA, and the Plataforma Deltana, which is offshore Venezuela. The purchase price consisted of a payment of \$100,000 plus the issuance of 2,000,000 common shares of the Company. CGX has assigned to Century an overriding royalty interest consisting of 2.5% of all revenues to the extent that the revenues are directly attributable to the contractor's share of Profit Oil. The Pomeroon PA issued in November 1997 is approximately 2.8 million acres. The area is subject to a boundary dispute with Venezuela and no work has been performed at the request of the Government of Guyana during these discussions: therefore the acreage is in standstill. An application has been made to the Government of Guyana to extend the term of the contract to November 2013. All work commitments up to the end of the initial period were deemed to be completed.

Berbice PA, Guyana

The Company, through its 62% owned subsidiary ON Energy, acquired the Berbice PA comprising 0.4 million acres onshore in October 2003. The Berbice PA is renewable for up to two three-year periods. The Government of Guyana has granted the First Renewal of the Licence effective October 2007, and an application has been made for Second Renewal effective October 2010. The principal terms of the Berbice PA are similar to those for the Corentyne PA. Although the Company is negotiating the renewal terms with the Government of Guyana and is investigating a work program to advance exploration of the Berbice PA, the Company took an impairment to exploration and evaluation expenditures of \$Nil (2010 - \$349,175) in the year ended December 31, 2011.

16. Capital stock (continued)

Stock Options

The Company established a share incentive plan to provide additional incentive to its directors, officers, employees and consultants for their efforts on behalf of the Company in the conduct of its affairs. The maximum number of common shares reserved for issuance under the share option plan comprising part of the share incentive plan may not exceed 9% of the number of common shares outstanding. Under the terms of the plan, all options vest immediately, unless otherwise specified. All options granted under the plan expire no later than the fifth anniversary of the grant date. As at December 31, 2011, the Company had 12,735,130 (2010 – 6,113,580) options available for issuance under the plan. The options outstanding to purchase common shares are as follows:

December 31,	2011		2010	
	Weighted Average Exercise Price (\$)	No. of Options	Weighted Average Exercise Price (\$)	No. of Options
Outstanding at beginning of year	1.48	11,295,000	1.39	10,280,000

Deferred Income Taxes Recoverable

The Canadian statutory income tax rate of 28.25% (2010 - 31%) is comprised of the federal income tax rate at approximately 16.5% (2010 – 18%) and the provincial income tax rate of approximately 11.75% (2010 – 13%). The Guyanese income tax rate is approximately 35% (2010 - 35%). The primary differences which give rise to the deferred income tax recoveries at December 31, 2011 and 2010 are as follows:

	<u>2011</u>	<u>2010</u>
	\$	\$
Deferred income tax assets		
Temporary differences	1,912,000	1,046,000
Losses carried forward	3,937,000	2,761,000
	5,849,000	3,807,000
Less : deferred tax assets not recognized	(5,849,000)	(3,807,000)
Net deferred income tax assets	-	-
Deferred tax liabilities		
Deferred income tax liabilities	-	-
Net deferred income tax assets	-	-

The Company has recorded a 100% valuation allowance against the deferred income tax asset due to uncertainty surrounding its realization.

At December 31, 2011, the Company had Canadian non-capital loss carry-forwards of C\$14,980,000 (2010 - C\$9,957,000) expiring at various dates from 2026 to 2030. In addition, the Company had Canadian capital losses of C\$2,050,000 (2010 - C\$2,050,000) and Canadian mining exploration and development expenses of C\$927,000 (2010 - C\$927,000). These tax benefits which have not been recognized in the accounts are available to carry forward indefinitely.

19. Commitments and Contingencies

The Company has entered into agreements for operating leases and service contracts. The future minimum lease payments, consultancy commitments and contract commitments over the next five years are as follows:

<i>Fiscal Year Ended December 31,</i>	Premises	Contracts
2012	281,000	33,395,000
2013	146,000	-
2014	152,000	-
2015	152,000	-
2016	139,000	-

Operating Leases

The Company has operating leases related primarily to obligations associated with office facilities.

Contractual Obligations

The Company has entered into various commitments and operating agreements associated with, among other things, oil and gas exploration, drilling rig services (see Service Contracts below), and oilfield and other services. Aggregate future obligations under these agreements total \$33.4 million as at December 31, 2011, of which the full amount is expected to be paid in 2012.

Service Contracts

The Company has entered into a contract for a drilling rig. The drilling rig commitment was entered into to fulfill the Company's commitment to drill the Eagle-1 well under the Corentyne PA. An estimated amount of \$25.7 million included in the \$33.4 million reference above relates to this service is expected to be paid in 2012.

20. Segmented information

Operating Segments

At December 31, 2011 the Company's operations comprise a single reporting operating segment engaged in petroleum and natural gas exploration in Guyana. The Company's corporate division only earns revenues that are considered incidental to the activities of the Company and therefore does not meet the definition of an operating segment as defined in IFRS 8 'Operating Segments'. As the operations comprise a single reporting segment, amounts disclosed in the consolidated financial statements also represent operating segment amounts.

An operating segment is defined as a component of the Company:

- that engages in business activities from which it may earn revenues and incur expenses;
- whose operating results are reviewed regularly by the entity's chief operating decision maker; and
- for which discrete financial information is available.
